Low-Probability High-Consequence Risk Analysis Ray Waller, 2013-11-21 In recent years public attention has focused on an array of low probability high consequence LC HC events that pose a significant threat to human health safety and the environment At the same time public and private sector responsibilities for the assessment and management of such events have grown because of a perceived need to anticipate prevent or reduce the risks In attempting to meet these responsibilities legislative judicial regulatory and private sector institutions have had to deal with the extraordinarily complex problem of assessing and balancing LP HC risks against the costs and benefits of risk reduction The need to help society cope with LP HC events such as nuclear power plant accidents toxic spills chemical plant explosions and transportation accidents has given rise to the development of a new intellectual endeavor LP HC risk analysis The scope and complexity of these analyses require a high degree of cooperative effort on the part of specialists from many fields Analyzing technical social and value issues requires the efforts of physicists biologists geneticists statisticians chemists engineers political scientists sociologists decision analysts management scientists economists psychologists ethicists lawyers and policy analysts Included in this volume are papers by authors in each of these disciplines The papers share in common a focus on one or more of the following questions that are generic to the analysis of LP HC risks

Risk Analysis Constantine Zervos, Kathleen Knox, Lee Abramson, Rob Coppock, 2013-11-11 This volume of the series Advances in Risk Analysis consists of papers presented at the 1988 Annual Meeting of the Society for Risk Analysis which was held October 30 through November 2 at the Mayflower Hotel in Washington DC The papers span the gamut of the increasing number of risk assessment topics addressed by the Society since it held its first annual meeting in June 1981 also in Washington DC Organized to promote interdisciplinary analyses the Society approaches risks from three broad perspectives 1 the impact of various risks on the health of the world's populations and on the environment 2 the social and political implications of specific risks and 3 the management and reduction of risks through the development of a risk analysis methodology and corresponding data bases The papers included in this volume typify these three approaches and illustrate their interdependence For example both cancer and noncancer health risks are examined for a variety of situations that exist within society The public's perception of risks and the correlation between that perception and the acceptance or nonacceptance of certain risks is also addressed In addition the progress to date on predicting and quantifying specific risks including the risks associated with the construction and use of large engineered systems is reported Included among the papers are several dealing with recent current issues

such as the impact of California's Proposition 65 hazardous waste disposal and chemical accidents Human Reliability and Safety Analysis Data Handbook David I. Gertman, Harold S. Blackman, 1993-12-16 Takes into account the human element as well as the classical aspects of mechanical electrical and chemical designs that contribute to risk Features a significant amount of data essential for risk analysis not normally available Contains numerous examples of authentic applications and case studies *Uncertainty in Risk Assessment, Risk Management, and Decision Making* V.T. Covello, Lester B. Lave, Alan Moghissi, V.R.R. Uppuluri, 2013-03-08 The subject of this volume uncertainties in risk assessment and management reflects an important theme in health safety and environmental decision making Most technological hazards are characterized by substantial uncertainty Recent examples include nuclear waste disposal acid rain asbestos in schools carcinogens in food and hazardous waste dealing with such uncertainty is arguably the most difficult and challenging task facing risk assessors and managers today Four primary sources of uncertainty in risk assessment and management can be identified 1 uncertainties about definitions 2 uncertainties about scientific facts 3 uncertainties about risk perceptions and attitudes and 4 uncertainties about values Uncertainties about definitions derive primarily from disagreements about the meaning and interpretation of key concepts such as probability Uncertainties about scientific facts derive primarily from disagreements about failure modes the probability and magnitude of adverse health or environmental consequences cause and effect relationships dose response relationships and exposure patterns Uncertainties about risk perceptions and attitudes derive primarily from disagreements about what constitutes a significant or acceptable level of risk Uncertainties about values derive primarily from disagreements about the desirability or worth of alternative risk management actions or consequences The papers in this volume address each of these sources of uncertainty from a variety of perspectives Reflecting the broad scope of risk assessment and risk management research the papers include contributions from safety engineers epidemiologists toxicologists chemists biostatisticians biologists decision analysts economists psychologists political scientists sociologists ethicists and lawyers Adaptive Stochastic Optimization Techniques with Applications James A. Momoh, 2015-12-02 Adaptive Stochastic Optimization Techniques with Applications provides a single convenient source for state of the art information on optimization techniques used to solve problems with adaptive dynamic and stochastic features Presenting modern advances in static and dynamic optimization decision analysis intelligent systems evolutionary programming *Risk Analysis* John J. Cochrane, Vincent T. Covello, 1999-05 Designed for consumers of risk information this book offers a balance between the technical and nontechnical literature The discipline of risk analysis has developed into an organized body of knowledge and methods only within the past 20 years The passage of federal laws to protect public health and the environment has generated rapid growth in risk analysis in numerous fields Statements of risk need to be understood to be useful to the public and environmental managers This guidebook provides a tool for understanding risk analysis Chapters overview of risk analysis hazard identification risk assessment and risk communication **Publications of Los Alamos**

Cho,1995 **Analysis and Management of Uncertainty** Bilal M. Ayyub,Madan M. Gupta,Laveen N. Kanal,1992 Topics in this book range from mathematical theories to probabilistic analysis of structures in civil engineering Mathematical background is first covered including probabilistic and possibilistic conceptualization of uncertainty the algebraic structure of conditional reasoning uncertainty modeling in anticipatory systems reasoning by hypothesizing causal models fuzzy sets and truth functionality The second part deals with expert systems and neuronal structures and includes papers on expert appraisalment and counter appraisalment with experton processes the management of uncertainty transferable belief models for expert judgement fuzzy neural expert systems and inverse dynamic adaptive control Of particular interest is the last section which deals with applications in engineering The articles presented here show just how far this field has progressed from theory to practice They deal with such topics as the prediction of earthquake ground motion and structural responses bridge ratings safety and reliability evaluations of transmission lines and transportation **Nuclear Technology** ,1987 **Sharing Environmental Risks** Raymond Burby,1991-01-09
