Perception And Information:

Perception and Information Paul J. Barber, David Legge, 2017-04-07 Perception is about the reception selection acquisition transformation and organization of sensory information This book originally published in 1976 discusses a number of aspects of human perception within a theoretical framework in which man is considered as a processor of information The main emphasis is on visual perception with particular reference to looking and pattern recognition selective listening and speech recognition are also discussed

Information, Sensation, and Perception Kenneth H. Norwich, 1993 One of the primary aims of this book is to show that nearly all of the empirical laws of sensory science discovered by laboratory measurement during the past 130 years can be derived theoretically from one fundamental equation The other primary aim of the book is to demonstrate the philosophical origins of this single equation and to show how it must change the way in which we view the nervous system and the process of perception This fundamental equation and the philosophy of perception which it embodies comprise what Norwich and his colleagues term as the entropy theory of perception

The Perception of Visual Information William R. Hendee, Peter N.T. Wells, 2012-12-06 The presentation and interpretation of visual information is essential to almost every activity in human life and most endeavors of modern technology This book examines the current status of what is known and not known about human vision how human observers interpret visual data and how to present such data to facilitate their interpretation and use Written by experts who are able to cross disciplinary boundaries the book provides an educational pathway through several models of human vision describes how the visual response is analyzed and quantified presents current theories of how the human visual response is interpreted discusses the cognitive responses of human observers and examines such applications as space exploration manufacturing surveillance earth and air sciences and medicine The book is intended for everyone with an undergraduate level background in science or engineering with an interest in visual science This second edition has been brought up to date throughout and contains a new chapter on Virtual reality and augmented reality in medicine

Innovative Computing 2025, Volume 3 Hao-Shang Ma, Hwa-Young Jeong, Yu-Wei Chan, Hsuan-Che Yang, 2025-07-27 This book comprises select proceedings of the 7th International Conference on Innovative Computing which was held in Bangkok Thailand Jan 19 23 2025 IC 2025 focusing on cutting edge research carried out in the areas of information technology science and engineering Some of the themes covered in this book are cloud communications and networking high performance computing architecture for secure and interactive IoT satellite communication wearable network and system infrastructure management etc The essays are written by leading international experts making it a valuable resource for researchers and practicing engineers alike

Human-Computer Interaction. HCI Applications and Services Julie A. Jacko, 2007-08-24 Here is the fourth of a four volume set that constitutes the refereed proceedings of the 12th International Conference on Human Computer Interaction HCII 2007 held in Beijing China jointly with eight other thematically similar conferences It covers business applications

learning and entertainment health applications work and collaboration support web based and mobile applications as well as advanced design and development support

Perception beyond Inference Liliana Albertazzi, Gert J. Van Tonder, Dhanraj Vishwanath, 2011-02-25 Proposing a new paradigm for perceptual science that goes beyond standard information theory and digital computation This book breaks with the conventional model of perception that views vision as a mere inference to an objective reality on the basis of inverse optics The authors offer the alternative view that perception is an expressive and awareness generating process Perception creates semantic information in such a way as to enable the observer to deal efficaciously with the chaotic and meaningless structure present at the physical boundary between the body and its surroundings Vision is intentional by its very nature visual qualities are essential and real providing an aesthetic and meaningful interface to the structures of physics and the state of the brain This view brings perception firmly in line with ethology and modern evolutionary biology and suggests new approaches in all disciplines that study or require an understanding of the ontology of mind The book is the joint effort of a multidisciplinary group of authors Topics covered include the relationships among stimuli neuronal processes and visual awareness After considering the mind dependent growing of information the book treats time and dynamics color shape and space language and perception perception art and design

Construction Methods for an Autonomous Driving Map in an Intelligent Network Environment Zhijun Chen, 2024-04-04 This book provides an overview of constructing advanced Autonomous Driving Maps It includes coverage of such methods as fusion target perception based on vehicle vision and millimeter wave radar cross field of view object perception vehicle motion recognition based on vehicle road fusion information vehicle trajectory prediction based on improved hybrid neural network and the driving map construction method driven by road perception fusion An Autonomous Driving Map is used for optimization of not only for a single vehicle but also for the entire traffic system

Human Perception of Visual Information Bogdan Ionescu, Wilma A. Bainbridge, Naila Murray, 2022-01-01 Recent years have witnessed important advancements in our understanding of the psychological underpinnings of subjective properties of visual information such as aesthetics memorability or induced emotions Concurrently computational models of objective visual properties such as semantic labelling and geometric relationships have made significant breakthroughs using the latest achievements in machine learning and large scale data collection There has also been limited but important work exploiting these breakthroughs to improve computational modelling of subjective visual properties The time is ripe to explore how

advances in both of these fields of study can be mutually enriching and lead to further progress This book combines perspectives from psychology and machine learning to showcase a new unified understanding of how images and videos influence high level visual perception particularly interestingness affective values and emotions aesthetic values memorability novelty complexity visual composition and stylistic attributes and creativity These human based metrics are interesting for a very broad range of current applications ranging from content retrieval and search storytelling to targeted advertising education and learning and content filtering Work already exists in the literature that studies the psychological aspects of these notions or investigates potential correlations between two or more of these human concepts Attempts at building computational models capable of predicting such notions can also be found using state of the art machine learning techniques Nevertheless their performance proves that there is still room for improvement as the tasks are by nature highly challenging and multifaceted requiring thought on both the psychological implications of the human concepts as well as their translation to machines

Modes of Perceiving and Processing Information H. L. Pick, Jr., E. Saltzman, 2014-03-18 First published in 1978 Since World War II the field of perception has developed in two major directions The first evolved out of the traditional psychophysical approach and is manifest today in the new psychophysics The second direction is in the increasing bond between the fields of perception and cognition This volume grew out of the context of this second direction a particular product of two workshops held in the Spring of 1974 and 1975 organized by the Committee on Cognitive Research of the Social Science Research Council The Committee on Cognition was organized in 1971 to encourage communication and interaction on specific problems in the area of cognition among the various social sciences

Perspectives on Perception and Action Herbert Heuer, Andries Sanders, 2016-07-07 Originally published in 1987 this title aimed to present an eclectic and biased account of the status of perception action relationships in various fields at the time The chapters can be divided into three sections The first focuses on motor control a neglected topic in the past and hence deserving the role of the starting point of this volume In addition motor control provides a good background to discuss the clear sensory and perceptual effects However motor processes are also highly relevant to perception which was usually less emphasized in the literature at the time Therefore a special section is devoted to motor processes in perception together with the issue of integrating information from different sources The book concludes with a section on attention and selection of perceptual information for subsequent action

Cognition and Perception Athanassios Raftopoulos, 2009-07-17 An argument that there are perceptual mechanisms that retrieve information in cognitively and conceptually unmediated ways

and that this sheds light on various philosophical issues In Cognition and Perception Athanassios Raftopoulos discusses the cognitive penetrability of perception and claims that there is a part of visual processes which he calls perception that results in representational states with nonconceptual content that is a part that retrieves information from visual scenes in conceptually unmediated bottom up theory neutral ways Raftopoulos applies this insight to problems in philosophy of science philosophy of mind and epistemology and examines how we access the external world through our perception as well as what we can know of that world To show that there is a theory neutral part of existence Raftopoulos turns to cognitive science and argues that there is substantial scientific evidence He then claims that perception induces representational states with nonconceptual content and examines the nature of the nonconceptual content The nonconceptual information retrieved he argues does not allow the identification or recognition of an object but only its individuation as a discrete persistent object with certain spatiotemporal properties and other features Object individuation however suffices to determine the referents of perceptual demonstratives Raftopoulos defends his account in the context of current discussions on the issue of the theory ladenness of perception namely the Fodor Churchland debate and then discusses the repercussions of his thesis for problems in the philosophy of science Finally Raftopoulos claims that there is a minimal form of realism that is defensible This minimal realism holds that objects their spatiotemporal properties and such features as shape orientation and motion are real mind independent properties in the world
