Metropolitan Management, Transportation and Planning ,1909 Distribution System Planning with Distributed Generation Abdullah Bin Humayd,2011 Distribution system design and planning is facing a major change in

paradigm because of deregulation of the power industry and with rapid penetration of distributed generation DG sources Distribution system design and planning are key features for determining the best expansion strategies to provide reliable and economic services to the customer In classical planning the load growth is typically met by adding a new substation or upgrading the existing substation capacity along with their feeders Today rapid advances in DG technology and their numerous benefits have made them an attractive option to the distribution companies power system planners and operators energy policy makers and regulators as well as developers This thesis first presents a comprehensive planning framework for the distribution system from the distribution company perspective It incorporates DG units as an option for local distribution companies LDCs and determines the sizing placement and upgrade plans for feeders and substations Thereafter a new heuristic approach to multi year distribution system planning is proposed which is based on a back propagation algorithm starting from the terminal year and arriving at the first year It is based on cost benefit analysis which incorporates various energy supply options for LDCs such as DG substations and feeders and determines the size placement and upgrade plan The proposed heuristic approach combines a bi level procedure in which Level 1 selects the optimal size and location of distribution system component upgrades and Level 2 determines the optimal period of commissioning for the selected upgrades in Level 1 The proposed heuristic is applied to a 32 bus radial distribution system The first level of the distribution system planning framework is formulated as a mixed integer linear programming MILP problem while the second level is a linear programming LP model The results demonstrate that the proposed approach can achieve better performance than a full optimization for the same distribution system
