

International Activities on the Development and Transfer of Biotechnology for Developing Countries

Coel C. Colucci¹ and John Karentz

Abstract

A growing range of international agricultural biotechnology expertise exists which seeks to address the challenges posed concerning the transfer of biotechnology to developing countries. This expertise is composed of research programs, advisory programs, bilateral or multilateral donor agencies, and regional or international biotechnology networks. Taken together, they constitute an important source of support and collaboration for developing countries planning or implementing biotechnology. However, products from this research also create challenges for decision makers, research scientists, and the public in developing countries regarding their development, transfer and safe use. As part of their approach, a number of these international initiatives include support for both biosafety and the efficiency of research. This paper will begin by summarizing information contained in a database specifically designed by the Intermediary Biotechnology Service to examine the relation between these internationally supported activities and the needs and capabilities of the national agricultural research programs in developing countries. Following a review of these international activities and their research objectives, the challenges and opportunities which they pose to the developing countries will be explored. The paper will close by summarizing ways to help maximize returns expected from international collaboration, and ways to manage the needs for both efficiency and safety while undertaking research for and with developing countries.

Introduction

Applications of biotechnology provide for more productive use of biological and genetic resources in developing country agricultural systems. Additionally, biotechnology's set of tools offer the opportunity for more efficient and specific modification of plant, animal and microbial genomes. However, these tools must be advanced as part of the agricultural research continuum, closely linked to a conventional agricultural research "foundation" in order to move results from laboratory to the field. In the context of the integration of agricultural biotechnology into conventional breeding, Day (1998) has identified the following areas of practical accomplishments from biotechnology:

(1) Transformation, gene isolation and cloning;
