Dr. David Alan Binder,2025-01-25 Where does the mind end and the machine begin AI vs Mind is a bold captivating confrontation between two of the most powerful forces shaping the 21st century human consciousness and artificial intelligence In this forward looking and deeply thought provoking work Dr David Alan Binder explores the dazzling rise of AI and what it reveals about the nature of the human mind As machines increasingly mimic human behavior the line between artificial and authentic thought begins to blur Are algorithms just fast calculators or

are they developing something closer to awareness Can machines be creative Can they dream Can they learn empathy or simulate it convincingly enough to replace human connection Binder tackles these questions with intellectual rigor and philosophical depth drawing from neuroscience computer science cognitive theory and ethics Whether you re excited about AI s potential or wary of its reach this book offers a compelling roadmap to the strange new terrain where silicon meets soul

Brain vs. Machine John Brockman,2015-10-06 As the world becomes ever more dominated by technology John Brockman s latest addition to the acclaimed and bestselling Edge Question Series asks more than 175 leading scientists philosophers and artists What do you think about machines that think The development of artificial intelligence has been a source of fascination and anxiety ever since Alan Turing formalized the concept in 1950 Today Stephen Hawking believes that AI could spell the end of the human race At the very least its development raises complicated moral issues with powerful real world implications for us and for our machines In this volume recording artist Brian Eno proposes that we re already part of an AI global civilization or what TED curator Chris Anderson elsewhere calls the hive mind And author Pamela McCorduck considers what drives us to pursue AI in the first place On the existential threat posed by superintelligent machines Steven Pinker questions the likelihood of a robot uprising Douglas Coupland traces discomfort with human programmed AI to deeper fears about what constitutes humanness Martin Rees predicts the end of organic thinking while Daniel C Dennett explains why he believes the Singularity might be an urban legend Provocative enriching and accessible Brain vs Machine may just be a practical guide to the not so distant future

Giant Brains, or, Machines That Think Edmund Callis Berkeley, 2022-10-13 Excerpt The subject of this book is a type of machine that comes closer to being a brain that thinks than any machine ever did before 1940 These new machines are called sometimes mechanical brains and sometimes sequence controlled calculators and sometimes by other names Essentially though they are machines that can handle information with great skill and great speed And that power is very similar to the power of a brain These new machines are important They do the work of hundreds of human beings for the wages of a dozen They are powerful instruments for obtaining new knowledge They apply in science business government and other activities They apply in reasoning and computing and the harder the problem the more useful they are Along with the release of atomic energy they are one of the great achievements of the present century No one can afford to be unaware of their significance

Deceitful Media Simone Natale, 2021 Artificial intelligence AI is often discussed as something extraordinary a dream or a nightmare that awakens metaphysical questions on human life Yet far from a distant technology of the future the true power of AI lies in its subtle revolution of ordinary life From voice assistants like Siri to natural language processors AI technologies use cultural biases and modern psychology to fit specific characteristics of how users perceive and navigate the external world thereby projecting the illusion of intelligence Integrating media studies science and technology studies and social psychology *Deceitful Media* examines the rise of artificial intelligence throughout history and exposes the very human fallacies behind this technology Focusing specifically on communicative AIs Natale argues that what we call AI is not a form of intelligence but rather a reflection of the human user Using the term banal deception he reveals that deception forms the basis of all human computer interactions rooted in AI technologies as technologies like voice assistants utilize the dynamics of projection and stereotyping as a means for aligning with our existing habits and social conventions By exploiting the human instinct to connect AI reveals our collective vulnerabilities to deception showing that what machines are primarily changing is not other technology but ourselves as humans Deceitful

Media illustrates how AI has continued a tradition of technologies that mobilize our liability to deception and shows that only by better understanding our vulnerabilities to deception can we become more sophisticated consumers of interactive media
