Abstract. - The problem of calculating higher-order contributions to QED structure functions is considered. A closed form for any given perturbative order is developed by means of a systematic approach. Analytical formulae for the structure function and its generating function are explicitly computed at the leading log level up to $O(\alpha^3)$. An alternative approach to the calculation of the n -th order contribution to the structure function, particularly useful for numerical applications, is developed. A numerical study of the relevance of third- and fourth-order hard-photon contribution is performed.

1. Introduction.

After the breakthrough of LEP, in the context of precision tests of the standard model, the accuracy required of theoretical calculations has risen to the per mille level [1], in order to be comparable with the experimental one [2]. It has been realized soon that not only the Born approximation cross-sections, but also the $O(\alpha)$ electroweak corrected ones are not adequate to describe e^+e^- interaction processes with the desired precision. If we restrict ourselves to QED corrections, we can state that this inadequacy is due to the hugeness of $O(\alpha)$ radiative corrections, which in several realistic situations can climb up to (30 + 40)% of the lowest-order cross-section [3]. This immediately points out the need for calculating the $O(\alpha^2)$ QED contribution. In order to meet this goal, when preparing the theoretical background for the experiments to be performed at LEP, the structure function method has been used by several authors [4], giving reliable and accurate results. This method allows an almost straightforward implementation of QED corrections, providing both the resummation of soft-photon contributions to all orders and the hard-photon terms to a given order. For the needs of LEP, aside the unavoidable exponentiation of the leading logarithmic terms, $O(\alpha^2)$ hard corrections were considered to be sufficiently exhaustive, and most of the calculations were therefore limited at that order [5]. Nevertheless, it is likely that in the future, at higher energies, the evaluation of higher-order hard-photon corrections will be demanded. Since in the structure function formalism QED corrections to any desired order are embedded in a coherent and universal way, it is our purpose here to show how these contributions can be extracted by means of a systematic approach to the problem.
