**Qualitative Simulation Modeling and Analysis** Paul A. Fishwick, Paul A. Luker, 2012-12-06 Recently there has been considerable interest in qualitative methods in simulation and mathematical modeling. Qualitative Simulation Modeling and Analysis is the first book to thoroughly review fundamental concepts in the field of qualitative simulation. The book will appeal to readers in a variety of disciplines including researchers in simulation methodology, artificial intelligence, and engineering. This book boldly attempts to bring together for the first time the qualitative techniques previously found only in hard-to-find journals dedicated to single disciplines. The book is written for scientists and engineers interested in improving their knowledge of simulation modeling. The qualitative nature of the book stresses concepts of invariance, uncertainty, and graph theoretic bases for modeling and analysis.

**Geocology: An Evolutionary Approach** Richard Huggett, 2002-09-11 Animals, plants, and soils interact with one another with the terrestrial spheres and with the rest of the Cosmos. On land, this rich interaction creates landscape systems or geoecosystems. Geocology investigates the structure and function of geoecosystems, their components, and their environment. The author develops a simple dynamic systems model, the brush equation, to form the conceptual framework for the book, suggesting an ecological and evolutionary approach. Exploring internal ecological interactions between geoecosystems and their near-surface environments, the atmosphere, hydrosphere, toposphere, and lithosphere, and external influences, both geological and cosmic, Geocology presents geoecosystems as dynamic entities constantly responding to changes within themselves and their surroundings. An evolutionary view emerges of geoeological systems and the animals, plants, and soils comprising them, providing a new way of thinking for the whole environmental complex and the rich web of interdependencies contained therein.

**Dependable Computing - EDCC-1** Klaus Echte, Dieter Hammer, David Powell, 1994-09-21 This book presents the proceedings of the First European Dependable Computing Conference EDCC 1, held in Berlin, Germany, in October 1994. EDCC is the merger of two former European events on dependable computing. The volume comprises 34 refereed full papers selected from 106 submissions. The contributions address all current aspects of dependable computing and reflect the state of the art in dependable systems research and advanced applications. Among the topics covered are hardware and software reliability, safety-critical and secure systems, fault tolerance, and detection, verification, and validation, formal methods, hardware and software testing, and parallel and distributed systems.
