**Quantification in Natural Languages** Emmon W. Bach, 1995-02-28 This extended collection of papers is the result of putting recent ideas on quantification to work on a wide variety of languages A central perspective of many of the papers follows the recognition of two broad types of quantificational strategies one associated with nominal structures and determiners the other with adverbial and other non nominal expression D quantifiers and A quantifiers The papers demonstrate both the unity and the variety of natural language quantificational forms and meanings Many of the papers also shed new light on questions of language typology and syntactic and morphological variation The languages discussed include English Dutch Italian American Sign Language Hindi and a number of languages of Australia Greenland and the Americas These comparative studies provide initial data for a typology of quantificational structures in natural languages with important implications for the study of universal grammar The book consists of research papers aimed at linguists philosophers and psychologists interested in semantics and linguistic form An introduction presents a sketch of the background of this research and some of the central issues discussed with pointers toward the included papers

Quantification in Natural Languages Elke Bach, E. Jelinek, A. Kratzer, Barbara B.H. Partee, 2014-01-14 This volume of papers grew out of a research project on Cross Linguistic Quantification originated by Emmon Bach Angelika Kratzer and Barbara Partee in 1987 at the University of Massachusetts at Amherst and supported by National Science Foundation Grant BNS 871999 The publication also reflects directly or indirectly several other related activities Bach Kratzer and Partee organized a two evening symposium on cross linguistic quantification at the 1988 Annual Meeting of the Linguistic Society of America in New Orleans held without financial support in order to bring the project to the attention of the linguistic community and solicit ideas and feedback from colleagues who might share our concern for developing a broader typological basis for research in semantics and a better integration of descriptive and theoretical work in the area of quantification in particular The same trio organized a six week workshop and open lecture series and related one day conference on the same topic at the 1989 LSA Linguistic Institute at the University of Arizona in Tucson supported by a supplementary grant NSF grant BNS 8811250 and Partee offered a seminar on the same topic as part of the Institute course offerings Eloise Jelinek who served as a consultant on the principal grant and was a participant in the LSA symposium and the Arizona workshops joined the group of editors for this volume in 1989

**Language** Hanoch Ben-Yami, 2019-09-16 Frege's invention of the predicate calculus has been the most influential event in the history of modern logic The calculus place in logic is so central that many philosophers think in fact of it when they think of logic This book challenges the position in contemporary logic and philosophy of language of the predicate calculus claiming that it is based on mistaken assumptions Ben Yami shows that the predicate calculus is different from natural language in its fundamental semantic characteristics primarily in its treatment of reference and quantification and that as a result the calculus is inadequate for the analysis of the semantics and logic of natural language Ben Yami develops both an alternative analysis of the semantics of natural language and an alternative deductive system comparable in its deductive power to first order predicate calculus but more adequate than it for the representation of the logic of natural language Ben Yami's book is a revolutionary challenge to classical first order predicate calculus casting doubt on many of the central claims of modern logic **Quantifiers in Action** Antonio Badia, 2009-04-03 The database industry is a multi billion world
