Assessing Bipedal Locomotion: Towards Replicable Benchmarks for Robotic and Robot-Assisted Locomotion Diego Torricelli, Jan Veneman, Jose Gonzalez-Vargas, Katja Mombaur, C. David Remy, 2019-12-24 Advances in Asset Management and Condition Monitoring Andrew Ball, Len Gelman, B. K. N. Rao, 2020-08-27 This book gathers select contributions from the 32nd International Congress and Exhibition on Condition Monitoring and Diagnostic Engineering Management COMADEM 2019 held at the University of Huddersfield UK in September 2019 and jointly organized by the University of Huddersfield and COMADEM International The aim of the Congress was to promote awareness of the rapidly emerging interdisciplinary areas of condition monitoring and diagnostic engineering management The contents discuss the latest tools and techniques in the multidisciplinary field of performance monitoring root cause failure modes analysis failure diagnosis prognosis and proactive management of industrial systems There is a special focus on digitally enabled asset management and covers several topics such as condition monitoring maintenance structural health monitoring non destructive testing and other allied areas Bringing together expert contributions from academia and industry this book will be a valuable resource for those interested in latest condition monitoring and asset management techniques **Harnessing the Power of Technology to Improve Lives** Luc de Witte, 2017-09-15 The lives of people with disabilities are complex and various and there are many situations where technology particularly assistive technology already makes a real difference It is clear that smart phone and tablet computer based solutions continue to enhance the independence of many users but it is also important that more traditional assistive technologies and services are not forgotten or neglected This book presents the proceedings of the 14th conference of the Association for the Advancement of Assistive Technology in Europe AAATE 2017 entitled Harnessing the power of technology to improve lives held in Sheffield UK in September 2017 This 4 day event about assistive technologies AT highlights the association s interest in innovating not only technology but also services and addresses the global challenge of meeting the needs of the increasing number of people who could benefit from assistive technology The 200 papers in the book are grouped under 30 subject headings and include contributions on a wide range of topical subjects including aging well and dementia care robotics eHealth and apps innovations universal design sport and disordered speech The breadth of the AAATE conference reflects people s life needs and so the book is sure to contain something of interest to all those whose work involves the design development and use of assistive technology whatever the situation The photo on the front cover illustrates the breadth of assistive technologies that can improve lives Photographer Simon Butler *Neuromechanics and Control of Physical Behavior: from Experimental and Computational Formulations to Bio-inspired Technologies* Massimo Sartori, Francisco J. Valero-Cuevas, Alfred C. Schouten, Matthew Tresch, Yoshihiko Nakamura, Manish Sreenivasa, 2019-08-15 The term neuromechanics defines an integrative approach that combines the neuromuscular control and the biomechanical aspects of physical behavior in humans and animals Crucial to this approach is a detailed description and modeling of the

interaction between the nervous system and the controlled biomechanical plant Only then do we have the broader context within which to understand evolution movement mechanics neural control energetics disability and rehabilitation In addition to enabling new basic science directions understanding the interrelations between movement neural and mechanical function should also be leveraged for the development of personalized wearable technologies to augment or restore the motor capabilities of healthy or impaired individuals Similarly this understanding will empower us to revisit current approaches to the design and control of robotic and humanoid systems to produce truly versatile human like physical behavior and adaptation in real world environments This Research Topic is therefore poised at an opportune moment to promote understanding of apparently disparate topics into a coherent focus
