Quantization Methods In Differential Equations:

Quantization Methods in the Theory of Differential Equations Vladimir E. Nazaikinskii, B.-W. Schulze, Boris Yu.

Sternin, 2002-05-16 This volume presents a systematic and mathematically rigorous exposition of methods for studying linear partial differential equations. It focuses on quantization of the corresponding objects: states, observables, and canonical transformations in the phase space. The quantization of all three types of classical objects is carried out in a unified way with the use of a special integral transform. This book covers recent as well as established results treated within the framework of a universal approach. It also includes applications and provides a useful reference text for graduate and research level readers.

Applications of Noncommutative Analysis to Operator Algebras on Singular Manifolds Vladimir Nazaikinskii, Bert-Wolfgang Schulze, Boris Sternin, 2008 **Differential Equations And The Stokes Phenomenon** B L J Braaksma, G K Immink, J

Top, M Van Der Put, 2002-12-10 This volume is the record of a workshop on differential equations and the Stokes phenomenon held in May 2001 at the University of Groningen. It contains expanded versions of most of the lectures given at the workshop. To a large extent both the workshop and the book may be regarded as a sequel to a conference held in Groningen in 1995 which resulted in the book *The Stokes Phenomenon and Hilbert's 16th Problem*. B L J Braaksma, G K Immink and M van der Put editors also published by World Scientific 1996. Both books offer a snapshot concerning the state of the art in the areas of

differential difference and q difference equations Apart from the asymptotics of solutions Painlevé properties and the algebraic theory new topics addressed in the second book include arithmetic theory of linear equations and Galois theory and Lie symmetries of nonlinear differential equations

Proceedings of the Conference on Differential Equations and the Stokes Phenomenon Boele Lieve Jan Braaksma, 2002 Offers a snapshot concerning the state of the art in the areas of differential difference and q difference equations

Differential Equations, Mathematical Physics, and Applications: Selim Grigorievich Krein Centennial Peter Kuchment, Evgeny Semenov, 2019-07-22 This is the second of two volumes dedicated to the centennial of the distinguished mathematician Selim Grigorievich Krein The companion volume is Contemporary Mathematics Volume 733 Krein was a major contributor to functional analysis operator theory partial differential equations fluid dynamics and other areas and the author of several influential monographs in these areas He was a prolific teacher graduating 83 Ph D students Krein also created and ran for many years the annual Voronezh Winter Mathematical Schools which significantly influenced mathematical life in the former Soviet Union The articles contained in this volume are written by prominent mathematicians former students and colleagues of Selim Krein as well as lecturers and participants of Voronezh Winter Schools They are devoted to a variety of contemporary problems in ordinary and partial differential equations fluid dynamics and various applications

Novel Mathematics Inspired by Industrial Challenges Michael Günther, Wil Schilders, 2022-03-30 This contributed volume convenes a rich selection of works with a focus on innovative mathematical methods with applications in real world industrial problems Studies included in this book are all motivated by a relevant industrial challenge and demonstrate that mathematics for industry can be extremely rewarding leading to new mathematical methods and sometimes even to entirely new fields within mathematics The book is organized into two parts Computational Sciences and Engineering and Data Analysis and Finance In every chapter readers will find a brief description of why such work fits into this volume an explanation on which industrial challenges have been instrumental for their inspiration and which methods have been developed as a result All these contribute to a greater unity of the text benefiting not only practitioners and professionals seeking information on novel techniques but also graduate students in applied mathematics engineering and related fields

Numerical Methods in Finance René Carmona, Pierre Del Moral, Peng Hu, Nadia Oudjane, 2012-03-23 Numerical methods in finance have emerged as a vital field at the crossroads of probability theory finance and numerical analysis Based on presentations given at the workshop Numerical Methods in Finance held at the INRIA Bordeaux France on June 1 2 2010 this book provides an overview of the major new advances in the numerical treatment of instruments with American exercises Naturally it covers the most recent research on the mathematical theory and the practical applications of optimal stopping problems as they relate to financial applications By extension it also provides an original treatment of Monte Carlo methods for the recursive computation of conditional expectations and solutions of BSDEs and generalized multiple optimal stopping problems and their applications to the valuation of energy

derivatives and assets The articles were carefully written in a pedagogical style and a reasonably self contained manner The book is geared toward quantitative analysts probabilists and applied mathematicians interested in financial applications

Toward the Exact WKB Analysis of Differential Equations, Linear or Non-Linear Christopher J. Howls, 2000
Nuclear Science Abstracts, 1953 [Beyond Partial Differential Equations](#) Horst Reinhard Beyer, 2007-04-04
The present volume is self contained and introduces to the treatment of linear and nonlinear quasi linear abstract evolution equations by methods from the theory of strongly continuous semigroups The theoretical part is accessible to graduate students with basic knowledge in functional analysis Only some examples require more specialized knowledge from the spectral theory of linear self adjoint operators in Hilbert spaces Particular stress is on equations of the hyperbolic type since considerably less often treated in the literature Also evolution equations from fundamental physics need to be compatible with the theory of special relativity and therefore are of hyperbolic type Throughout detailed applications are given to hyperbolic partial differential equations occurring in problems of current theoretical physics in particular to Hermitian hyperbolic systems This volume is thus also of interest to readers from theoretical physics
