Pervasive Computing Aboul Ella Hassanien, 2009 Pervasive computing also referred to as ubiquitous computing or ambient intelligence aims to create environments where computers are invisibly and seamlessly integrated and connected into our everyday environment Pervasive computing and intelligent multimedia technologies are becoming increasingly important although many potential applications have not yet been fully realized These key technologies are creating a multimedia revolution that will have significant impact across a wide spectrum of consumer business healthcare and governmental domains This useful volume provides up to date and state of the art coverage of the diverse topics related to pervasive computing and intelligent multimedia technologies The use of different computational intelligence based approaches to various problems in pervasive computing are examined including video streaming intelligent behavior modeling and control for mobile manipulators tele gaming indexing video summaries for quick video browsing web service processes virtual environments ambient intelligence and prevention and detection of attacks to ubiquitous databases Topics and features Includes a comprehensive overview providing a thorough literature review and an outline of the important research challenges Discusses pervasive computing approaches in the context of intelligent multimedia Examines virtual reality technology mobile virtual environments and the potential use of intelligent multimedia and ubiquitous computing in the hotels of the future Describes various approaches in ambient intelligence for home health care for the elderly and those suffering from Alzheimer s disease for volcano monitoring and for preventing attacks to ubiquitous databases Investigates issues in web services and situation awareness in pervasive computing environments Explores wireless network applications such as mobile agents and e commerce This textbook reference is an invaluable resource for researchers postgraduate and senior undergraduate students and practitioners involved in pervasive computing intelligent multimedia and computational intelligence

Object Management in Distributed Database Systems for Stationary and Mobile Computing Environments Wujuan Lin, Bharadwaj Veeravalli, 2013-11-21 Network based computing domain unifies all best research efforts presented from single computer systems to networked systems to render overwhelming computational power for several modern day applications Although this power is expected to grow with respect to time due to technological advancements application requirements impose a continuous thrust on network utilization and on the resources to deliver supreme quality of service Strictly speaking network based computing domain has no confined scope and each element offers considerable challenges Any modern day networked

application strongly thrives on efficient data storage and management system which is essentially a Database System There have been number of books to date in this domain that discuss fundamental principles of designing a database system Research in this domain is now far matured and many researchers are venturing in this domain continuously due to a wide variety of challenges posed In this book our domain of interest is in exposing the underlying key challenges in designing algorithms to handle unpredictable requests that arrive at a Distributed Database System DDDBS and evaluating their performance These requests are otherwise called as on line requests arriving at a system to process Transactions in an on line Banking service Airline Reservation system Video on Demand system etc are few examples of on line requests

Resource Management in Mobile Computing Environments Constandinos X. Mavromoustakis, Evangelos Pallis, George Mastorakis, 2014-06-09 This book reports the latest advances on the design and development of mobile computing systems describing their applications in the context of modeling analysis and efficient resource management It explores the challenges on mobile computing and resource management paradigms including research efforts and approaches recently carried out in response to them to address future open ended issues The book includes 26 rigorously refereed chapters written by leading international researchers providing the readers with technical and scientific information about various aspects of mobile computing from basic concepts to advanced findings reporting the state of the art on resource management in such environments It is mainly intended as a reference guide for researchers and practitioners involved in the design development and applications of mobile computing systems seeking solutions to related issues It also represents a useful textbook for advanced undergraduate and graduate courses addressing special topics such as mobile and ad hoc wireless networks peer to peer systems for mobile computing novel resource management techniques in cognitive radio networks and power management in mobile computing systems
