Demand Characteristics

Orne, M.T. (1962). On the social psychology of the psychological experiment: with particular reference to demand characteristics and their implications. *American Psychologist*, 17, 776-783.

Introduction

When somebody asks you to take part in a psychology experiment, how do you behave? The paper by Orne looks at this question and suggests that our behaviour immediately changes when we are given this request. His review article begins with a brief discussion of some of the social psychological characteristics of the psychology experiment. It moves on to a discussion of 'demand characteristics', examining what they are, how they might affect research findings, and what can be done about them. The paper includes a number of references to both informal and formal psychology experiments conducted by Orne and his colleagues.

The psychological experiment as a social situation

The experimental situation is one which takes place within the context of an explicit agreement of the subject to participate in a special form of social interaction known as 'taking part in an experiment' (p.777).

Orne's first point is that the psychological experiment, involving as it does an interaction between experimenter(s) and subject(s), should be regarded as a social situation. In other words a psychology experiment always takes place in a particular social context. In everyday life we expect people's behaviour to be affected by the social contexts in which they find themselves. For example imagine that you are in a pub, a church, a football ground, and a shopping centre. If someone bumps into you in the shopping centre, you are likely to say "Well really!", but at a football ground you wouldn't even notice it. In a church if someone put a plate in front of you then you might put money in it, but if
