R Dursteler, 2016-05-23 An interdisciplinary approach to the Mediterranean's rich multicultural history. Located at the intersection of Asia, Africa, and Europe, the Mediterranean has connected societies for millennia, creating a shared space of intense economic, cultural, and political interaction. Greek temples in Sicily, Roman ruins in North Africa, and Ottoman fortifications in Greece serve as reminders that the Mediterranean has no fixed national boundaries or stable ethnic and religious identities. In *The Mediterranean World*, Monique O'Connell and Eric R. Dursteler examine the history of this contested region from the medieval to the early modern era, beginning with the fall of Rome around 500 CE and closing with Napoleon's attempted conquest of Egypt in 1798. Arguing convincingly that the Mediterranean should be studied as a singular unit, the authors explore the centuries when no lone power dominated the Mediterranean Sea and invaders brought their own unique languages and cultures to the region. Structured around four interlocking themes: mobility, state development, commerce, and frontiers, this beautifully illustrated book brings new dimensions to the concepts of Mediterranean nationality and identity.

The Golden Age of Data Visualization Kim Marriott, 2024-09-04 We are living in the Golden Age of Data Visualization. The COVID-19 pandemic has demonstrated how we increasingly use data visualizations to make sense of the world. Business analysts fill their presentations with charts, journalists use infographics to engage their readers, we rely on the dials and gauges on our household appliances, and we use mapping apps on our smartphones to find our way. This book explains how and why this has happened. It details the evolution of information graphics, the kinds of graphics at the core of data visualization: maps, diagrams, charts, scientific and medical images, from prehistory to the present day. It explains how the cultural context, production and presentation technologies, and data availability have shaped the history of data visualization. It considers the perceptual and cognitive reasons why data visualization is so effective and explores the little-known world of tactile graphics, raised line drawings used by people who are blind. The book also investigates the way visualization has shaped our modern world. The European Renaissance and the Scientific Revolution relied on maps and technical and scientific drawings and graphics influence how we think about abstract concepts like time and social connection. This book is written for data visualization researchers and professionals and anyone interested in data visualization and the way we use graphics to understand and think about the world.

The Birth of Territory Stuart Elden, 2013-09-09 Political theory professor Stuart Elden explores the history of land ownership and control from the ancient to the modern world in *The Birth of Territory*. Territory is one of the central political concepts of the modern world and indeed functions as the primary way the world is divided and controlled politically. Yet territory has not received the critical attention afforded to other crucial concepts such as sovereignty, rights, and justice. While territory continues to matter politically and territorial disputes and arrangements are studied in detail, the concept of territory itself is often neglected today. Where did the idea of exclusive ownership of a portion of the earth's surface come from, and what kinds of complexities are hidden behind that seemingly straightforward definition? *The Birth of Territory* provides a detailed

account of the emergence of territory within Western political thought Looking at ancient medieval Renaissance and early modern thought Stuart Elden examines the evolution of the concept of territory from ancient Greece to the seventeenth century to determine how we arrived at our contemporary understanding Elden addresses a range of historical political and literary texts and practices as well as a number of key players historians poets philosophers theologians and secular political theorists and in doing so sheds new light on the way the world came to be ordered and how the earth's surface is divided controlled and administered The Birth of Territory is an outstanding scholarly achievement a book that already promises to become a classic in geography together with very few others published in the past decades Political Geography An impressive feat of erudition American Historical Review

The Brokered World Simon Schaffer, 2009 Collection of essays focusing on the roles of intermediaries such as brokers and spies messengers and translators missionaries and entrepreneurs in linking different parts of the ever more densely entangled systems of knowledge production and circulation at a key moment in the development of global scientific commercial and political systems The period 1770-1820 was decisive for the reformation of imperial projects in the wake of military catastrophe and politico-economic crisis both in the Atlantic and the Asian Pacific spheres economic and political worlds dominated by complex trade systems and violent contest This conjuncture also saw the overhaul of networks and institutions of natural knowledge whether commercial voluntary or organs of state Both the industrial and the second scientific revolutions have been dated to this moment New and decisive relations were forged between different cultures knowledge carriers The authors consider knowledge movements of the epoch that escape simple models of metropolitan centre and remote colonial periphery They question the immutable character of mediators and agents in knowledge communication
