Thomas, 1999-11 Multilevel modelling is a data analysis method that is frequently used to investigate hierarchical data structures in educational behavioural health and social sciences disciplines Multilevel data analysis exploits data structures that cannot be adequately investigated using single level analytic methods such as multiple regression path analysis and structural modelling This text offers a comprehensive treatment of multilevel models for univariate and multivariate outcomes It explores their similarities and differences and demonstrates why one model may be more appropriate than another given the research objectives Provided by Publisher **Interactive LISREL** Mathilda Du Toit, S. H. C. Du Toit, Douglas M. Hawkins, 2001 Overview of the interface Prelis examples Lisrel examples Multilevel examples Firm examples New statistical features Syntax **LISREL 8** K. G. Structural Equation Modeling Bruce H. Pugesek, Adrian Tomer, Alexander von Eye, 2003-01-23 Structural equation modelling SEM is a technique that is used to estimate analyse and test models that specify relationships among variables The ability to conduct such analyses is essential for many problems in ecology and evolutionary biology This book begins by explaining the theory behind the statistical methodology including chapters on conceptual issues the implementation of an SEM study and the history of the development of SEM The second section provides examples of analyses on biological data including multi group models means models P technique and time series The final section of the book deals with computer applications and contrasts three popular SEM software packages Aimed specifically at biological researchers and graduate students this book will serve as valuable resource for both learning and teaching the SEM methodology Moreover data sets and programs that are presented in the book can also be downloaded from a website to assist the learning process

Applied Multivariate Statistics for the Social Sciences, Fifth Edition James P. Stevens, 2012-11-12 This best selling text is written for those who use rather than develop statistical methods Dr Stevens focuses on a conceptual understanding of the material rather than on proving results Helpful narrative and numerous examples enhance understanding and a chapter on matrix algebra serves as a review Annotated printouts from SPSS and SAS indicate what the numbers mean and encourage interpretation of the results In addition to demonstrating how to use these packages the author stresses the importance of checking the data assessing the assumptions and ensuring adequate sample size by providing guidelines so

that the results can be generalized The book is noted for its extensive applied coverage of MANOVA its emphasis on statistical power and numerous exercises including answers to half The new edition features New chapters on Hierarchical Linear Modeling Ch 15 and Structural Equation Modeling Ch 16 New exercises that feature recent journal articles to demonstrate the actual use of multiple regression Ch 3 MANOVA Ch 5 and repeated measures Ch 13 A new appendix on the analysis of correlated observations Ch 6 Expanded discussions on obtaining non orthogonal contrasts in repeated measures designs with SPSS and how to make the identification of cell ID easier in log linear analysis in 4 or 5 way designs Updated versions of SPSS 15 0 and SAS 8 0 are used throughout the text and introduced in chapter 1 A book website with data sets and more Ideal for courses on multivariate statistics found in psychology education sociology and business departments the book also appeals to practicing researchers with little or no training in multivariate methods Prerequisites include a course on factorial ANOVA and covariance Working knowledge of matrix algebra is not assumed
