Principles of Catalyst Development James T. Richardson, 2014-01-14 Successful industrial heterogeneous catalysts fulfill several key requirements in addition to high catalytic activity for the desired reaction with high selectivity where appropriate they also have an acceptable commercial life and are rugged enough for transportation and charging into plant reactors Additional requirements include the need to come online smoothly in a short time and reproducible manufacturing procedures that involve convenient processes at acceptable cost The development of heterogeneous catalysts that meet these often mutually exclusive demands is far from straightforward and in addition much of the actual manufacturing technology is kept secret for commercial reasons thus there is no modern text that deals with the whole of this important subject *Principles of Catalyst Development* which deals comprehensively with the design development and manufacture of practical heterogeneous catalysts is therefore especially valuable in meeting the long standing needs of both industrialists and academics As one who has worked extensively on a variety of catalyst development problems in both industry and academia James T Richardson is well placed to write an authoritative book covering both the theory and the practice of catalyst development Much of the material contained in this book had its origin in a series of widely acclaimed lectures attended mainly by industrial researchers given over many years in the United States and Europe All those in industry who work with catalysts both beginners and those of considerable experience should find this volume an essential guide

Fundamentals of Industrial Catalytic Processes C. H. Bartholomew, Robert J. Farrauto, 2011-11-30

Catalysis is central to the chemical industry as it is directly or involved in the production of almost all useful chemical products In this book the authors present the definitive account of industrial catalytic processes Throughout Fundamentals of Industrial Catalytic Processes the information is illustrated with many case studies and problems This book is valuable to anyone wanting a clear account of industrial catalytic processes but is particularly useful to industrial and academic chemists and engineers and graduate working on catalysis This book also Covers fundamentals of catalytic processes including chemistry catalyst preparation properties and reaction engineering Addresses heterogeneous catalytic processes employed by industry Provides detailed data on existing catalysts and catalytic reactions process design and chemical engineering Covers catalysts used in fuel cells

,1990 Principles and Methods for Accelerated Catalyst Design and Testing E.G. Derouane, Valentin Parmon, Francisco

Lemos, Fernando Ramôa Ribeiro, 2012-12-06 High throughput experimentation has met great success in drug design but it has so far been scarcely used in the field of catalysis We present in this book the outcome of a NATO ASI meeting that was held in Vilamoura Portugal between July 15 and 28 2001 with the objective of delineating and consolidating the principles and methods underpinning accelerated catalyst design evaluation and development There is a need to make the underlying principles of this new methodology more widely understood and to make it available in a coherent and integrated format The latter objective is particularly important to the young scientists who will constitute the new catalysis researchers generation Indeed this field which is at the frontier of fundamental science and may be a renaissance for catalysis is one which is much more complex than classical catalysis itself It implies a close collaboration between scientists from many disciplines

chemistry physics chemical and mechanical engineering automation robotics and scientific computing in general In addition this emerging area of science is also of paramount industrial importance as progress in this area would collapse the time necessary to discover new catalysts or improve existing ones

Industrial Catalytic Processes for Fine and Specialty Chemicals Sunil S Joshi,Vivek V. Ranade,2016-04-12 Industrial Catalytic Processes for Fine and Specialty Chemicals provides a comprehensive methodology and state of the art toolbox for industrial catalysis The book begins by introducing the reader to the interesting challenging and important field of catalysis and catalytic processes The fundamentals of catalysis and catalytic processes are fully covered before delving into the important industrial applications of catalysis and catalytic processes with an emphasis on green and sustainable technologies Several case studies illustrate new and sustainable ways of designing catalysts and catalytic processes The intended audience of the book includes researchers in academia and industry as well as chemical engineers process development chemists and technologists working in chemical industries and industrial research laboratories Discusses the fundamentals of catalytic processes catalyst preparation and characterization and reaction engineering Outlines the homogeneous catalytic processes as they apply to specialty chemicals Introduces industrial catalysis and catalytic processes for fine chemicals Includes a number of case studies to demonstrate the various processes and methods for designing green catalysts

Handbook of Heterogeneous Catalysis, 5 Volume Set Gerhard Ertl,Helmut Knözinger,Jens Weitkamp,1997-05-15 The first comprehensive survey of the principles and applications of heterogeneous catalysis Starting with the invention of D bereiner s tinder box and reaching importance with Haber s development of ammonia synthesis heterogeneous catalysis has become a multi billion dollar business Simultaneously literature on heterogeneous catalysis has become increasingly widespread and difficult to follow This handbook collects the available knowledge on heterogeneous catalysis and provides the reader with easy to find yet comprehensive information With contributions from more than 200 leading experts from all over the world it covers all aspects of the subject from physico chemical foundations to large scale industrial applications With its highly topical contributions the straightforward presentation of the material and its comprehensive coverage this handbook sets new standards Saving you the time for laborious searches for information it is an indispensable tool for every scientist working in heterogeneous catalysis

Industrial Catalysis Ruud J. Wijngaarden,A. Kronberg,K. Roel Westerterp,1998-11-09 This is a book for developers of catalysts and for practitioners working in the field of design operation and optimization of chemical reactors in which heterogeneous catalysis is performed It is designed to give a better understanding of the phenomena which can influence catalyst performance Since two disciplines chemistry and chemical engineering meet in catalyst research and development this book covers the chemical point of view for engineers and the engineering point of view for chemists It starts with an introduction explaining selectivity activity and effectiveness providing the fundamentals for the newcomer

Catalyst preparation and catalyst testing are also described A method is introduced that can be used to calculate the effectiveness of catalyst pellets as a function of shape size pore size type of kinetics and diffusion and temperature and pressure conditions Optimization of catalysts and troubleshooting are also covered This is a book without any rivals because of its practical relevance

Counseling Across the Lifespan Cindy L Juntunen, Donald R Atkinson, 2002 Counseling Across the Lifespan expands the perimeters of counseling with its emphasis on preventive techniques for adjustment problems in the lifespan of a normal individual This cogent work focuses on counseling intervention strategies from the unique perspective of an individual s lifespan placing techniques in the proper development context By concentrating on life stages from childhood through old age the authors identify the nature and origin of various psychological issues such as self identity and healthy lifestyle development in adolescents family violence in young adults or retirement transitions for older adults The intervention tools needed to confront these issues are presented through succinct pedagogical features including case examples checklists for evaluating clients and exercises
