

2.2 Sports Nutrition

The origin of Nutrition as a science dates back to approximately the mid-XVIII century. However, if we trace the origin of **Sports Nutrition (SN)**, we can see that it dates back much further. The earliest existing records of the practice of training and diet date back to the Olympic Games of ancient Greece. In any case, these texts still remain half truth, half legend. It would be more adequate to see them as an example of how man's interest in discovering the effect that different types of food can have on our performance capability is age-old.

Even though scientific advances have enabled us to make huge advances in the field of nutrition, it is still considered a relatively young science. This is even more true in the case of SN. It could be claimed that, as a science in its own right, it still finds itself in the early stages of development. As an example of this, the earliest records of the eating habits of Olympic athletes began to surface around fifty years ago, and the majority of in-depth data available is the result of research conducted in the last fifteen to twenty years.

SN could be seen as an application of nutritional principles in order to maintain health and improve sports performance. That is, it is concerned with the aspects of nutritional science related to the interaction between nutrition and physical activity. In the last few decades, SN has made considerable progress, to the point that it has moved on from being based on empirical studies focused on the effects of dietary manipulations to involve direct research on the physiological basis of the nutritional demands specific to exercise.

Relationship between Training, Nutrition and Performance

The main factors that affect athletic performance ability are **genetic inheritance** and the **quality of the training process**. Beyond those factors, nutrition plays a critical role in optimizing performance capacity (American College of Sports Medicine, 2000; Leutholtz & Kreider, 2001). This means that for an athlete to perform to the best of his ability, training and nutrition should be both optimal and perfectly coordinated (Figure 2). What an athlete eats and drinks will without doubt affect their health, weight and body composition, the availability of energy substrates during exercise, recovery time after training or competition and, consequently, their performance (American College of Sports Medicine, 2000).
