Re Constructing Elementary Science:

Re/constructing Elementary Science Wolff-Michael Roth, Kenneth George Tobin, Steve Ritchie, 2001 Re Constructing Elementary Science seeks to improve the way science is taught in the elementary school There are three main contradictions that make it difficult for teachers and students to engage in meaningful activities from which understandings result The central issues in this book are framed in terms of three dichotomies that lead to tensions arising from the dialectic of opposing aspects of teaching and learning First there is a tension between learning as an individual process cultural production and as a cultural process cultural reproduction Second there is a tension between science and technology applied science Finally there exists a tension between children s interaction with nature and their language for describing and explaining nature Exemplary case studies are featured that show the tremendous capabilities of elementary students to talk about technology and in the process to learn to talk science These case studies are couched in an ongoing professional dialogue among the authors and the requirements to make such exemplary science happen in other classrooms

Understanding Teacher Expertise in Primary Science Anna Traianou,2007-01-01 What does it mean to be an expert primary science practitioner How do primary teachers use science subject knowledge in their practice This book addresses these questions from a sociocultural perspective challenging currently influential constructivist accounts It treats the nature of teacher expertise as a dynamic capacity exemplified by those who are recognised as experts in their local communities of practice In line with this it provides an in depth case study of the perspective and practices of a primary science teacher who is locally and more widely recognised as an expert practitioner One of the conclusions is that primary science expertise is eclectic in character requiring the employment in a flexible way of a variety of forms of knowledge views of learning and teaching strategies in order to deal successfully with the contingent situations faced in the classroom The study of expertise in action is particularly important at a time when teaching is increasingly configured in terms of competencies and standards Its implications for the education of primary science practitioners are profound Students on education courses teachers and researchers will find this book of value for its careful exploration of arguments about the nature of knowledge and learning
