Microcomputer Kenneth L. Bowles, 2013-12-11 This book is designed both for introductory courses in computer problem solving at the freshman and sophomore college level and for individual self study An earlier version of the book has been used seven times for teaching large introductory classes at University of California San Diego UCSD This preface is intended for the instructor or for anyone sophisticated enough in contemporary computing practice to be able to advise the prospective student The amount of material presented has been completed by about 55 percent of all students taking the course where UCSD schedules 10 weeks of classes in a quarter We have taught the course using Keller s Personalized System of Instruction PSI though the organization of the book does not require that plan to be used PSI methods allow slightly more material to be absorbed by the students than is the case with the traditional lecture recitation presentation PSI allows grading according to the number of chapter units completed Virtually all students who pass the course at UCSD do complete the first ten essential chapters and the Exercises associated with them For a conventional presentation under the semester system the 15 chapters should present an appropriate amount of material For a conventional course under the quarter system one might not expect to complete more than the first 12 chapters except on an extra credit basis

The Design of Well-Structured and Correct Programs Suad Alagic, Michael A. Arbib, 2013-11-11

The major goal of this book is to present the techniques of top down program design and verification of program correctness hand in hand It thus aims to give readers a new way of looking at algorithms and their design synthesizing ten years of research in the process It provides many examples of program and proof development with the aid of a formal and informal treatment of Hoare s method of invariants Modern widely accepted control structures and data structures are explained in detail together with their formal definitions as a basis for their use in the design of correct algorithms We provide and apply proof rules for a wide range of program structures including conditionals loops procedures and recursion We analyze situations in which the restricted use of gotos can be justified providing a new approach to proof rules for such situations We study several important techniques of data structuring including arrays files records and linked structures The secondary goal of this book is to teach the reader how to use the programming language Pascal This is the first text to teach Pascal programming in a fashion which not only includes advanced algorithms which operate on advanced data structures but also provides the full axiomatic definition of Pascal due to Wirth and Hoare Our approach to the language is very different from that of a conventional programming text

Engymetry and Personal Computing in Nuclear Medicine Dietrich P. Pretschner, 2013-03-08 Nuclear medicine is not and has not been a purely imaging discipline It is function analysis that has always been the focal point This fact has become particularly obvious in the last few years through the employment of new short lived radionuclides new technical procedures and data processing The disadvantage of function analysis in nuclear medicine through the use of radioactively labeled compounds is that more and more complicated and expensive equipment has to be used A further characteristic is that these machines are stationary and that the patients cannot be examined under physiological conditions For technical reasons the x camera is developing in the direction of measuring mainly the so called soft I emitters at the present time On the other hand positron emitters are the radionuclides which are of interest for metabolic functions At present positron cameras are even more expensive and complicated machines the use of which is very demanding In this book Priv Doz Dr med Dipl Ing D Peter pretschner has described a new system which contains his ideas and his technical developments He describes a solution to the urgent questions and difficulties in the employment of radioactive substances for diagnosis It does not demand large resources and can be used under the appropriate individual physiological conditions Here he was helped by his training as a natural scientist and engineer as well as by his being an experienced clinician
