Congressional Record United States. Congress, 1999 **Soil Survey of Rockingham County, New Hampshire** Russell J. Kelsea, 1994 **Rock Piles and Field Clearing Practices on Historic Farms and Pastures in Northeastern United States** James E. Gage, Mary E. Gage, 2024-11-01 It is hard to imagine that the most controversial subject in 21st century northeastern archaeology concerns rock piles found on historic farm lands Yet rock piles are at the heart of a contentious debate about their cultural affiliation purpose and age Are they agricultural field clearing piles or Indigenous ceremonial features The short answer is some are the byproduct agricultural activities while others were intentionally built as an expression of Indigenous spiritual beliefs How do we distinguish between the two In order to answer that question it is necessary to have a solid historical and scientific understanding of field clearing practices in northeastern United States Using farm manuals and 19th century agricultural journals this book delves into the surprisingly complex topic of stone removal and disposal practices on farms in northeastern United States and beyond It establishes some basic criteria for identifying clearing piles Groups of Indigenous stone features including rock piles cairns have survived on unfarmed lands and old pastures They have largely been misidentified as field clearing piles and attributed to efforts to improve soil quality However new research shows that permanent pastures were rarely if ever cleared of stones 19th century farmers had a solid understanding of why their pastures were being degraded and the solutions they needed to fix them None of those solutions involved stone removal This book draws together in a single volume over a decade of intensive research into an obscure but critically important topic in historic archaeology Agricultural field clearing features are not considered archaeological significant Ceremonial landscapes traditional cultural properties are considered culturally sensitive sites Distinguishing between the two is an important task *Stone & Webster Public Service Journal*, 1929 **Coping with Biological Growth on Stone Heritage Objects** Daniela Pinna, 2017-05-18 *Coping with Biological Growth on Stone Heritage Objects* Methods Products Applications and Perspectives offers hands on guidance for addressing the specific challenges involved in conserving historical monuments sculptures archaeological sites and caves that have been attacked and colonized by micro and macroorganisms The volume provides many case studies of removal of biological growth with practical advice for making the right choices It presents detailed and updated information related to biocides and to alternative substances features that will be valuable to dealing with these challenges The author's goal is to provide access to information and offer the conceptual framework needed to understand complex issues so that the reader can comprehend the nature of conservation problems and formulate her his own views From bacteria to plants biological agents pose serious risks to the preservation of cultural heritage In an effort to save heritage objects buildings and sites conservators activities aim to arrest mitigate and prevent the damages caused by bacteria algae fungi lichens plants and birds Although much has been learned about these problems information is scattered across meeting proceedings and assorted journals that often are not available to restorers

and conservators This book fills the gap by providing a comprehensive selection and examination of international papers published in the last fifteen years focusing on the appropriate methods techniques and products that are useful for the prevention and removal of micro and macroorganisms that grow on artificial and natural stone works of art including wall paintings Results on new substances with antimicrobial properties and alternative methods for the control of biological growth are presented as well The book also emphasize issues on bioreceptivity of stones and the factors influencing biological growth and includes an outline of the various organisms able to develop on stones a discussion on the bioprotection of stones by biofilms and lichens a review of the main analytical techniques and a section on bioremediation This volume will be a valuable reference for cultural heritage conservators and restorers scientists and heritage site staff involved in conservation and maintenance of buildings archaeological sites parks and caves
