Receptor Subunits And Complexes:

Receptor Subunits and Complexes A. Burgen, E. A. Barnard, 1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology

GABA and Sleep Jaime M. Monti, Seithikurippu Ratnas Pandi-Perumal, Hanns Möhler, 2010-09-28 GABA gamma aminobutyric acid is the main neurotransmitter regulating sleep The majority of drugs presently in use for the treatment of sleep disorders act by enhancing GABAergic neuronal inhibition The GABA system is therefore of prime clinical relevance for the therapy of insomnia The focus of this volume is on the neuropsychopharmacology and the clinical impact of the GABA system in regulating sleep and wakefulness It presents molecular neuropharmacological systems biological and clinical approaches to the understanding of the mechanism of action of GABA and GABAergic drugs It also explores the role

of GABA in the basic drives that affect sleep and the influences that adapt sleep and wakefulness to external events

Diversity and Functions of GABA Receptors: A Tribute to Hanns Möhler, Part B, 2015-01-27 Diversity and Functions of GABA Receptors A Tribute to Hanns Möhler Part B a new volume of Advances in Pharmacology presents the diversity and functions of GABA Receptors The volume looks at research performed in the past 20 years which has revealed specific physiological and pharmacological functions of individual GABA receptor subtypes providing novel opportunities for drug development Contributions from the best authors in the field An essential resource for pharmacologists immunologists and biochemists

Diversity of Interacting Receptors Leo G. Abood, Abel Lajtha, 1995 This volume increases understanding of functional significance of neuronal receptor diversity by presenting the latest work on such subjects as the genetic regulation of receptor subtypes the functional characteristics of neurons with subtypes second messenger and ion channel diversity species and regional differences in receptor subtypes changes occurring with age and pathologic state and changes in receptor structure and gene expression associated with prolonged exposure to agonists and antagonists
