The Shogun's Silver Telescope Timon Screech, 2020-10-15 The East India Company founded in London in 1600 was originally a spice trading organisation But its governors soon began to think bigger After a decade they started to plan voyages to more fabulous places notably India and Japan Rich in silver Japan was a desirable trading partner crucially it was also cold in winter England's main export was woollen cloth which would not sell in hot places so the Company envisaged adding to its spice runs by sailing back and forth to Japan exchanging wool for silver Maps suggested that this could be done quickly above Russian But these maps also made Japan twenty times too large the size of India in fact Knowing the Spanish and Portuguese had preceded them the Company prepared a special present for its first extended sailing to India and Japan In the end the Company missed India but got to Japan in 1613 The Shogun the military dictator of Japan was presented with a silver telescope in the name of King James It was the first telescope ever to leave Europe and the first made as a presentation item Before this initial ship had even returned the Company dispatched another named the New Year's Gift with an equally stunning cargo almost 100 oil paintings These would be given and sold to the Indian and Japanese courts This book looks at the formation and history of the Company but mostly examines the meaning of these two extraordinary cargoes What were they supposed to mean and what effect did they have on quizzical Asian rulers

Transactions of the Asiatic Society of Japan Asiatic Society of Japan, 1930 Mathematics Unbound Karen Hunger Parshall, Adrian Clifford Rice, Although today's mathematical research community takes its international character very much for granted this global nature is relatively recent having evolved over a period of roughly 150 years from the beginning of the nineteenth century to the middle of the twentieth century During this time the practice of mathematics changed from being centered on a collection of disparate national communities to being characterized by an international group of scholars for whom the goal of mathematical research and cooperation transcended national boundaries Yet the development of an

international community was far from smooth and involved obstacles such as war political upheaval and national rivalries Until now this evolution has been largely overlooked by historians and mathematicians alike This book addresses the issue by bringing together essays by twenty experts in the history of mathematics who have investigated the genesis of today s international mathematical community This includes not only developments within component national mathematical communities such as the growth of societies and journals but also more wide ranging political philosophical linguistic and pedagogical issues The resulting volume is essential reading for anyone interested in the history of modern mathematics It will be of interest to mathematicians historians of mathematics and historians of science in general
