Testing of Communicating Systems Myungchul Kim, Sungwon Kang, Keesoo Hong, 2013-03-19 The aim of this book is to bring together the research of academics and practitioners in the field of communication systems testing It covers four major topic areas types of testing including conformance testing inoperability testing performance and QoS testing phases of testing including test case generation means of testing test execution and test results analysis classes of systems tested and the theory and practice of testing including test related algorithms practical testing methodology and practical testing experience

Electronic Chips & Systems Design Languages Jean Mermet, 2013-03-09 Electronic Chips Systems Design Languages outlines and describes the latest advances in design languages The challenge of System on a Chip SOC design requires designers to work in a multi lingual environment which is becoming increasingly difficult to master It is therefore crucial for them to learn almost in real time from the experiences of their colleagues in the use of design languages and how these languages have become more advanced to cope with system design System designers as well as students willing to become system designers often do not have the time to attend all scientific events where they could learn the necessary information This book will bring them a selected digest of the best contributions and industry strength case studies All the levels of abstraction that are relevant from the informal user requirements down to the implementation specifications are addressed by different contributors The author together with colleague authors who provide valuable additional experience presents examples of actual industrial world applications Furthermore the academic concepts presented in this book provide excellent theories to student readers and the concepts described are up to date and in so doing provide most suitable root information for Ph D postgraduates

Tools and Algorithms for the Construction and Analysis of Systems Tiziana Margaria, 1996-03-20 This book presents the refereed proceedings of the Second International Workshop on Tools and Algorithms for the Construction and Analysis of Systems TACAS 96 held in Passau Germany in March 1996 The book presents 19 revised full papers selected from a total of 47 submissions together with 11 tool presentations and 3 invited papers The collection of papers addresses all current aspects of the design and analysis of distributed systems the volume is organized in topical sections on tools model checking and testing security models and methods case studies and logic and programs
