Real Time Programming 1995:

Real Time Programming 1995 (WRTP '95) Phillip Laplante, Phillip A. Laplante, Wolfgang A. Halang, 1996 These proceedings contain the papers presented at the 20th IFAC IFIP Annual Workshop on Real Time Programming WRTP 95 held in Florida USA on 6-10 November 1995. The unifying theme of the Workshop was the problem presented by the design, construction and maintenance of complex computer systems which are important in sectors such as manufacturing, communications, defence, transportation, aerospace, hazardous environments, energy and health care. These systems frequently include distributed heterogeneous networks and are constrained by requirements on performance, real time behaviour, fault tolerance, security, adaptability, development time and cost, long life concerns and other areas. The papers were grouped under various topics: complex and dependable real time systems, formal methods, languages, tools and environments, systems and software engineering, advanced applications such as imaging, database systems and heterogeneous systems, and reflect the desire to bring together industrial, academic and government experts from various disciplines and to promote long term research near term effective complex systems requirements and promising tools.

Real-time Systems and Programming Languages Alan Burns, Andrew J. Distributed Systems for System Architects Paulo Verissimo, Luís Rodrigues, 2012-12-06 The primary audience for this book are advanced undergraduate students and graduate students Computer architecture as it happened in other fields such as electronics evolved from the small to the large that is it left the realm of low level hardware constructs and gained new dimensions as distributed systems became the keyword for system implementation As such the system architect today assembles pieces of hardware that are at least as large as a computer or a network router or a LAN hub and assigns pieces of software that are self contained such as client or server programs Java applets or protocol modules to those hardware components The freedom she he now has is tremendously challenging The problems alas have increased too What was before mastered and tested carefully before a fully fledged mainframe or a closely coupled computer cluster came out on the market is today left to the responsibility of computer engineers and scientists invested in the role of system architects who fulfil this role on behalf of software vendors and integrators add value system developers R D institutes and final users As system complexity size and diversity grow so increases the probability of inconsistency unreliability non responsiveness and insecurity not to mention the management overhead What System Architects Need to Know The insight such an architect must have includes but goes well beyond the functional properties of distributed systems
