Real Time Programming 1999:

<u>Real Time Programming 1999</u> A.H. Frigeri,W.A. Halang,S.H. Son,1999 In 1999 the IFAC IFIP Workshop on Real Time Programming WRTP joined forces with the Workshop on Active and Real Time Database Systems ARTDB Both series of workshops provide an excellent forum for exchanging information on recent scientific and technological advances and practices in real time computing a field that is becoming an essential enabling discipline of both control engineering and computer science and engineering The annual Workshop on Real Time Programming and the bi annual Workshop on Active and Real time Databases Systems are intended as meetings of relatively small numbers of experts in their fields taking place as truly international events The 1999 Workshop maintained the outstanding quality of both series providing an opportunity to assess the state of the art to present new results and to discuss possible lines of future developments Primarily it focused on software development for real time systems real time operating systems and active and real time database systems In particular the technical programme of the Workshop covered latest research and developments in requirements engineering software engineering active and real time database systems communication and clock synchronisation embedded systems formal methods operating systems and scheduling Out of 58 submissions from 19 countries the International Programme Committee selected 26 regular papers and 8 reserve papers for presentation at the Workshop Contributions come from Europe North America Australia and the Far East In addition to these the programme also featured two world renowned keynote speakers and a discussion panel about the state of the art in the field of active real time database systems

Real-time Programming 2000 (WRTP'2000) Alfons Crespo,Joan Vila,2000 This Proceedings contains the papers presented at the IFAC Workshop on Real Time Programming held in Spain During these last twelve years the Workshop on Real Time Programming WRTP has developed as an excellent forum for presenting the most relevant advances in the field of real time computing and exchanging information and experiences among the real time community Several of the most relevant people of this community have participated in the reviewing process that plays every time a more important role This year 48 papers from 16 different countries have been submitted to the Workshop After the review process 31 of them have been selected for presentation including 2 industrial papers They cover topics of formal methods scheduling distributed systems embedded systems design techniques applications etc Their discussion proved to be interesting and productive and we are sure that it helped to throw light on some of the aspects of Real Time Programming WRTP 2000 was organised in co operation with another event related to the real time field the Workshop on Algorithms and Architecture for Real Time Control AARTC Both Workshops were scheduled with a common day of joint activities This experience increased the level of cooperation and information exchanging between this two research communities which have several aspects in common   *Software Engineering - ESEC/FSE '99* Oskar Nierstrasz,Michel Lemoine,1999-08-30 For the second time the European Software Engineering Conference is being held jointly with the ACM SIGSOFT Symposium on the Foundations of Software Engine ing

FSE Although the two conferences have different origins and traditions there is a significant overlap in intent and subject matter Holding the conferences jointly when they are held in Europe helps to make these thematic links more explicit and enco ages researchers and practitioners to attend and submit papers to both events The ESEC proceedings have traditionally been published by Springer Verlag as they are again this year but by special arrangement the proceedings will be distributed to members of ACM SIGSOFT as is usually the case for FSE ESEC FSE is being held as a single event rather than as a pair of collocated events Submitted papers were therefore evaluated by a single program committee ESEC FSE represents a broad range of software engineering topics in mainly two continents and consequently the program committee members were selected to represent a spectrum of both traditional and emerging software engineering topics A total of 141 papers were submitted from around the globe Of these nearly half were classified as research pers aquarterasexperiencepapers andtherestasbothresearchandexperiencepapers Twenty nine papers from five continents were selected for presentation and inclusion in the proceedings Due to the large number of industrial experience reports submitted we have also introduced this year two sessions on short case study presentations   Reliable Software Technologies Ada-Europe 2000 Hubertus B. Keller,Erhard Plödereder,2006-12-30 This book constitutes the proceedings of the 23rd Ada Europe International Conference on Reliable Software Technologies Ada Europe 2018 held in Lisbon Portugal in June 2018 The 10 papers presented in this volume were carefully reviewed and selected from 27 submissions They were organized in topical sections named safety and security Ada 202X handling implicit overhead real time scheduling and new application domains   *Networking - ICN 2001* Pascal Lorenz,2003-06-29 The International Conference on Networking ICN01 is the first conference in its series aimed at stimulating technical exchange in the emerging and important field of networking On behalf of the International Advisory Committee it is our great pleasure to welcome you to the International Conference on Networking Integration of fixed and portable wirele ss access into IP and ATM networks presents a cost effective and efficient way to provide seamless end to end connectivity and ubiquitous access in a market where demands on Mobile and Cellular Networks have grown rapidly and predicted to generate billions of dollars in revenue The deployment of broadband IP based technologies over Dense Wavelength Division Multiplexing DWDM and integration of IP with broadband wireless access networks BWANs are becoming increasingly important In addition fixed core IP ATM networks are constructed with recent move to IP MPLS over DWDM More over mobility introduces further challenges in the area that have neither been fully understood nor resolved in the preceding network generation This first Conference ICN01 has been very well perceived by the International networking community A total of 300 papers from 39 countries were submitted from which 168 have been accepted Each paper has been reviewed by several members of the scientific Program Committee   **Embedded Systems Design** Bruno Bouyssounouse,2005-03-30 This extensive and increasing use of embedded systems and their integration in everyday products mark a significant evolution in information science and technology Nowadays embedded systems design is subject

to seamless integration with the physical and electronic environment while meeting requirements like reliability availability robustness power consumption cost and deadlines Thus embedded systems design raises challenging problems for research such as security reliable and mobile services large scale heterogeneous distributed systems adaptation component based development and validation and tool based certification This book results from the ARTIST FP5 project funded by the European Commision By integration 28 leading European research institutions with many top researchers in the area this book assesses and strategically advances the state of the art in embedded systems The coherently written monograph like book is a valuable source of reference for researchers active in the field and serves well as an introduction to scientists and professionals interested in learning about embedded systems design   Computer Safety, Reliability, and Security Floor Koornneef,2000-10-11 This book constitutes the refereed proceedings of the 19th International Conference on Computer Safety Reliability and Security SAFECOMP 2000 held in Rotterdam The Netherlands in October 2000 The 33 revised full papers presented together with three invited papers were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections on verification and validation software process improvement formal methods safety guidelines standards and certification hardware aspects safety assessment design for safety and transport and infrastructure   **Real-time UML** Bruce Powel Douglass,2000 Real time and embedded systems must make the most of very limited processor and memory sources and UML is an invaluable tool for achieving these goals Key topics include information on tradeoffs associated with each object design approach design patterns and identification strategies detailed appendix on OMG and more   *Distributed Systems for System Architects* Paulo Veríssimo,Luís Rodrigues,2012-12-06 The primary audience for this book are advanced undergraduate students and graduate students Computer architecture as it happened in other fields such as electronics evolved from the small to the large that is it left the realm of low level hardware constructs and gained new dimensions as distributed systems became the keyword for system implementation As such the system architect today assembles pieces of hardware that are at least as large as a computer or a network router or a LAN hub and assigns pieces of software that are self contained such as client or server programs Java applets or pro tocol modules to those hardware components The freedom she he now has is tremendously challenging The problems alas have increased too What was before mastered and tested carefully before a fully fledged mainframe or a closely coupled computer cluster came out on the market is today left to the responsibility of computer engineers and scientists invested in the role of system architects who fulfil this role on behalf of software vendors and in tegrators add value system developers R D institutes and final users As system complexity size and diversity grow so increases the probability of in consistency unreliability non responsiveness and insecurity not to mention the management overhead What System Architects Need to Know The insight such an architect must have includes but goes well beyond the functional properties of distributed systems   Proceedings of the ...
