Advances in Convex Analysis and Global Optimization Nicolas Hadjisavvas, Panos M. Pardalos, 2013-12-01. There has been much recent progress in global optimization algorithms for nonconvex continuous and discrete problems from both a theoretical and a practical perspective. Convex analysis plays a fundamental role in the analysis and development of global optimization algorithms. This is due essentially to the fact that virtually all nonconvex optimization problems can be described using differences of convex functions and differences of convex sets. A conference on Convex Analysis and Global Optimization was held during June 5-9 2000 at Pythagorion Samos Greece. The conference was honoring the memory of C. Caratheodory 1873-1950 and was endorsed by the Mathematical Programming Society (MPS) and by the Society for Industrial and Applied Mathematics (SIAM) Activity Group in Optimization. The conference was sponsored by the European Union through the EPEAEK program, the Department of Mathematics of the Aegean University and the Center for Applied Optimization of the University of Florida, by the General Secretariat of Research and Technology of Greece, by the Ministry of Education of Greece and several local Greek government agencies and companies. This volume contains a selective collection of refereed papers based on invited and contributing talks presented at this conference. The two themes of convexity and global optimization pervade this book. The conference provided a forum for researchers working on different aspects of convexity and global optimization to present their recent discoveries and to interact with people working on complementary aspects of mathematical programming.

Recent Advances on Meta-Heuristics and Their Application to Real Scenarios Javier Del Ser Lorente, 2013-01-30. This book aims at attracting the interest of researchers and practitioners around the applicability of meta heuristic algorithms to practical scenarios arising from different knowledge disciplines. Emphasis is placed on evolutionary algorithms and swarm intelligence as computational means to efficiently balance the tradeoff between optimality of the produced solutions and the complexity derived from their estimation. In summary, this book serves as a good start point for early stage investigators in the initial steps of their research on meta heuristics grounded on both a thorough literature review and the practical orientation of its contents.

The main contents and character of the monograph did not change with respect to the first edition. However, within most chapters, we incorporated quite a number of modifications which take into account the recent development of the field, the very valuable suggestions and comments that we received from numerous colleagues and students, as well as our own experience while using the book. Some errors and misprints in the first edition are also corrected.

PREFACE TO THE FIRST EDITION

The enormous practical need for solving global optimization problems, coupled with a rapidly advancing computer technology, has allowed one to consider problems which a few years ago would have been considered computationally intractable. As a consequence, we are seeing the creation of a large and increasing number of diverse algorithms for solving a wide variety of multiextremal global optimization problems. The goal of this book is to systematically clarify and unify these diverse approaches in order to provide insight into the underlying concepts and their properties. Aside from a coherent view of the field, much new material is presented.
