

Shock and Vibration Handbook. By Cyril M. Harris and Charles E. Crede. Second Edition, 1976. McGraw-Hill Book Co., New York. Pages 1322. Cost \$32.50.

REVIEWED BY J. P. DEN HARTOG*

This valuable handbook, first published in 1961 in three volumes, containing 50 chapters in about 2000 pages, now (1976) reappears in its second edition as a single volume with 44 chapters in about 1300 pages. The changes (other than deletions) between the two editions are minimal and not particularly important. The first volume of the old edition (Chapters 1-20) is reprinted entirely in the second edition, also as Chapters 1-20 with few changes except heavy deletions in Chapters 13 (Instruments) and 19 (Standards). The second volume (Chapters 21-37) again appears as 21-37 in the new edition with the same chapter headings; here a pruning process has diminished the number of pages by some 30 percent. The real change occurs in the third volume, Chapters 38-50 in the old edition of which the first half (Chapters 38-44) appears in the new second edition with the same numbers 38-44, with small deletions, limited principally to Chapter 40, Machine Tools, while the last half of the third volume of the old edition, Chapters 45-50 with 243 pages simply has been omitted from the new version. The omitted matter covers Road and Rail Vehicles, Ships, Aircraft and Missiles, Acoustic Waves, Blast Resistant Structures and Seismic Waves; most certainly an impressive list of subjects on which the information in the old edition would be very welcome. More details on these changes are printed below in small type. In conclusion: it can be said that this handbook has been a very valuable one for some 15 years and it is warmly recommended to the reader in the new, but most particularly in the old, more complete edition.
