Polymer Composite Materials – Interface Phenomena & Processes Y. Ivanov, Valerii Cheshkov, Margarita Natova, 2012-04-08 New technologies demand new materials Polymer composites with their wide range of possible fillers and polymers open the way to an enormous range of materials with differing chemical physical and mechanical properties The ultimate goal of polymer composite research is to formulate procedures that will lead to the design of composites with preset i e specified properties Based on many years experience in the field the authors prepare the way towards just such a design procedure The key element is the analysis and classification of the state of the filler polymer interfaces from the point of view of their acid base adsorption interactions These interfacial phenomena play a pivotal role in determining overall properties of the composite its rheological behaviour its structural properties catalytic effects in polymerization and polycondensation and other technological characteristics The book discusses and evaluates the extensive previous research scattered throughout the literature in Eastern Europe and the West presents numerous experimental studies and sets new benchmarks for the analysis of polymer composites The book is required for researchers wanting to keep abreast of the progress in the burgeoning fields of polymer analysis and design

Polymer Composite Materials I[A]chko Pavlov Ivanov, Valerii Cheshkov, Margarita Natova, 2001 Self-Consistent Methods for Composites S.K. Kanaun, V. Levin, 2007-12-20 The theory of heterogeneous materials has been intensively developed during the past few decades The main reason for the interest of many researchers in this part of the mechanics of solids is the wide area of application of heterogeneous materials in modern material engineering Self consistent methods form a well known branch of the theory of heterogeneous materials In most books devoted to the mechanics and physics of heterogeneous media the reader can find self consistent solutions But there are no books covering the entire spectrum of self

consistent methods in application to the calculation of static and dynamic properties of heterogeneous materials This book has been written to cover this gap It is written for engineers because here they can find the equations for the effective properties of composites reinforced with various types of inclusions The main advantage of self consistent methods is that they give relatively simple equations for the effective parameters of composites Such equations for static and dynamic properties of matrix composites reinforced with various types of inclusions for porous media media with cracks and other defects for polycrystals etc are widely used in engineering practice and many new self consistent solutions are presented in the book This book is written also for scholars who wish to develop the theory of heterogeneous media In the book they will find the basic ideas and algorithms for the construction of self consistent solutions The book shows how these methods may be applied to composites with inclusions of complex structures to problems of wave propagation

for calculation of higher statistical moments of physical fields in composites Various ways for improving self consistent solutions are proposed and discussed
