## **Organizations And Strategies In Astronomy:**

Organizations and Strategies in Astronomy 6 Andre Heck,2014-11-23 When I was a child growing up in South America I often went camping in the wild and hence had direct access to the wondrous Southern sky the Southern Cross was all mine at the time Little did I know then that the study of the sky would take such a huge importance in my life and that in the end astronomy and astrophysics would in many ways become my country and my religion I have lived in several different countries and when asked my nationality I am always very tempted to reply astronomer I started as a theorist and my only dream in my youth was to spend nights thinking and calculating with paper and pencil and to have the impression by dawn that I had understood something new So at the time astronomy was seen or dreamt by me as a solitary endeavour with periodic encounters with my wise adviser and professors it is this model that I adopted when doing my PhD work My generation has lived through many revolutions of all kinds Those in astronomy I believe remain particularly remarkable and I am a true product of them Now I elect to live and work in large organizations and to share my endeavours with many people And I relish the series of Andre Heck on Organizations and Strategies in Astronomy which help us recover our memories reconstitute our own story and read with glee about our neighbouring or far away colleagues

**Organizations and Strategies in Astronomy 7** Andre HECK,2007-09-18 Astronomy is the most ancient science humans have practiced on Earth It is a science of extremes and of large numbers extremes of time from the big bang to infinity of distances of temperatures of density and masses of magnetic field etc It is a science which is highly visible not only because stars and planets are accessible in the sky to the multitude but also because the telescopes themselves are easily distinguishable usually on top of scenic mountains and also because their cost usually represent a substantial proportion of the national budget and of the taxpayers' contributions to that budget As such astronomy cannot pass unnoticed It touches on the origins of matter of the Universe where we live on life and on our destiny It touches on philosophy as well as on religion Astronomy is the direct contact of humankind with its origins and the immensity of universal nature It is indeed a science of observation where experimentation is practically possible and which is ruled by mathematics physics chemistry statistical analysis and modelling while offering the largest number of verifications of the most advanced theories of fundamental physics such as general relativity and gravitation At the beginning of the 21 century astronomy is clearly a multidisciplinary activity touching on all aspects of science It is therefore logical that in the past and still now astronomy has attracted the most famous scientists be they pure observers mathematicians physicists biologists experimentalists and even politicians

*Organizations and Strategies in Astronomy* Andre HECK,2013-06-05 Anyone who doubts that astronomy is enjoying a golden age has only to browse the pages of Organizations and Strategies in Astronomy Vol 5 Our golden age is defined not only by the enormity of new discoveries of dark energy dark matter extra solar planets and the evolution of Mars but also by the breadth diversity and creativity within our community This volume records our history in a period of such rapid change and growth that individual

astronomers are hard pressed to keep abreast of their own fields and neighborhoods much less of developments world wide Since the 1950 s changes in the landscape of astronomy are manifold We have witnessed two epochs of big telescope construction the 4 meter class telescopes of the 60s and 70s and the 8 to 10 meter class telescopes of the 90s continuing through today We accomplished the transition from photographic to digital data and we continue to improve the size and sensitivity of astronomical detectors We have witnessed the flowering of radio astronomy and the opening of the full electromagnetic spectrum through space astronomy We have seen the growth of national and international astronomy facilities and a dramatic broadening of the accessibility of data both through observing facilities available through open competition based on scientific merit and through deep rich archives of data

**Organizations and Strategies in Astronomy** Andre Heck,2012-12-06 I am most grateful to Andre Heck for his invitation to write a foreword to OSA Volume 4 I will use this valued opportunity to emphasise those topics in Vol 4 which I consider important even if other topics may be of even greater importance in the universal scale of things At the outset let me say that I commend Vol 4 to its readers it contains much of very great interest for organisations and strategies in astronomy A topic which I consider to be of very great importance at this time is Adverse Environmental Impact on Astronomy There are two papers on this topic in OSA 4 Cohen on Strategies for Protecting Radio Astronomy and Schwarz on Light Pollution Control The growth in the extent of use the power and spectral demand for radio transmission continues to increase virtually exponentially The impact on the listening services such as radio astronomy has been severe Only by creativity in developing new techniques for radio noise including legal transmissions reduction and by participating fully in the allocation process for radio frequencies has radio astronomy developed to the powerful investigative tool it is today
