The Evolutionary Roots of Reproductive Ageing and Reproductive Health Across the Tree of Life Jean-Francois Lemaitre, Jean-Michel Gaillard, 2024-01-02

Aquatic Ecotoxicology of Legacy Pollutants and Emerging Contaminants in Animals and Plants Guilherme Malafaia, 2025-09-26 This book reviews the ecological impacts of emerging pollutants on aquatic plants and animals. It covers sources, mechanisms of action, and ecotoxicology effects on these organisms. Written by experts in the field, the book offers a comprehensive ecotoxicological analysis involving various emerging contaminants and aquatic organisms, including plants, invertebrates, and vertebrates. Particular attention is given to the translocation of pharmaceuticals and personal care products in aquatic plants, the ecotoxicity of pesticides, and the challenges posed by engineered nanomaterials. In this book, readers will find topics like microplastic pollution indicators in gastropod molluscs, the ecotoxicity of emerging contaminants in aquatic birds and fish, and the recent advances in the ecotoxicity of non-chemical toxic agents. Readers will also discover how aquatic reptiles can be used as biomonitoring models of the ecotoxicity of pesticides in aquatic and semi-aquatic mammals. Paired with its companion volume, *Aquatic Ecotoxicology of Emerging Pollutants: Concepts, Occurrence, and Challenges*, this book offers a concise yet comprehensive overview of emerging contaminants in the aquatic environment. Given its breadth, this book appeals to a broad and diverse audience and is an authoritative and essential resource for academics, researchers, and policymakers interested in deepening their knowledge of environmental issues and aquatic ecosystems.

Fish Ecophysiology Akshay Kothari, 2025-02-20 *Fish Ecophysiology: Unveiling Aquatic Life* delves into the fascinating world of fish and their interactions with aquatic environments. Authored by esteemed experts, this comprehensive book serves as a valuable resource for anyone curious about the physiological adaptations of fish. Whether you're a seasoned biologist or a curious enthusiast, this book offers insights into how fish thrive in diverse ecosystems, from freshwater lakes to the ocean's depths. We explore how fish navigate and adapt to various environmental factors. From temperature fluctuations to water chemistry changes, fish have evolved remarkable mechanisms to maintain homeostasis and survive. Readers will gain a deeper understanding of how factors such as dissolved oxygen levels, salinity, and pH impact fish physiology and behavior, shedding light on the delicate balance of aquatic ecosystems. The book also delves into the intricacies of fish metabolism and energetics, unraveling the processes that govern growth, reproduction, and survival. By examining the physiological mechanisms behind feeding behavior, digestion, and nutrient utilization, readers will uncover the strategies fish employ to extract energy from their diets and allocate resources efficiently. This insight is invaluable for fisheries management and conservation efforts.

European Directory of Research Centers in the Fisheries Sector CEC, DG for Fisheries, 2012-12-06 The future of the Common Fisheries Policy depends on progress in the relevant areas of research. This applies to the whole range

of management decisions where precise reliable and complete data are essential to inform those who must decide on the pursuit of existing activities especially in the area of maritime fisheries and the development of promising new activities such as aquaculture Every day the Director General of DG XIV requires more and more information to prepare decisions which will affect the future of all those in the Community who are dependent on fishing and aquaculture There is thus a high level of direct demand from DG XIV Over and above this immediate and specific requirement for short and medium term applications research affects the competitiveness of the Community This is one area which favours the collaboration across frontiers of all those who seek to advance knowledge But although DG XIV is uniquely placed to appreciate the importance of research into fisheries and aquaculture there is no question of succumbing to the temptation to directly control the scope of research or its conduct The notion of subsidiarity can best be understood by examining the existing structures in the Member States The Commission must act first and foremost as a catalyst by promoting the circulation of information and the coordination of research programmes
