Science And The Media:

Science and the Media Donald Kennedy, Geneva Overholser, 2010 How science and technology are covered by the media is a central factor in scientific illiteracy Journalists value timeliness speed simplicity and clarity Yet stories about science and technology may be long building complex and without dramatic time pegged events The need to grab and hold attention to write tight stories or produce short segments can come at the cost of context and nuance One observer noting journalism s preference for attention grabbing conflict driven events has joked that reporters two thousand years ago would have covered the heck out of the crucifixion and missed Christianity As the world grows more complex there is an increasing need for citizens to understand the scientific and technological dimensions of daily news events Journalists play a critical role in helping readers listeners and viewers appreciate the science underlying major policy choices And scientists in turn must effectively communicate to the public especially through the media We hope that the essays gathered in this volume will generate a broader understanding of the intertwined roles of the media and the scientific and technical community in helping to ensure a well informed public

Reflections on Science and the Media June Goodfield, 1981 *Science and the Media* Peter Joseph Farago, 1976

Science in the Media Paul Ryan Brewer, Barbara L. Ley, 2021-09-30 This timely and accessible text shows how portrayals of science in popular media including television movies and social media influence public attitudes around messages from the scientific community affect the kinds of research that receive support and inform perceptions of who can become a scientist The book builds on theories of cultivation priming framing and media models while drawing on years of content analyses national surveys and experiments A wide variety of media genres from Hollywood blockbusters and prime time television shows to cable news channels and satirical comedy programs science documentaries and children s cartoons to Facebook posts and YouTube videos are explored with rigorous social science research and an engaging accessible style Case studies on climate change vaccines genetically modified foods evolution space exploration and forensic DNA testing are presented alongside reflections on media stereotypes and disparities in terms of gender race and other social identities Science in the Media illuminates how scientists and media producers can bridge gaps between the scientific community and the public foster engagement with science and promote an inclusive vision of science while also highlighting how readers themselves can become more active and critical consumers of media messages about science Science in the Media serves as a supplemental text for courses in science communication and media studies and will be of interest to anyone concerned with publicly engaged science

The Sciences' Media Connection -Public Communication and its Repercussions Simone Rödder, Martina Franzen, Peter Weingart, 2011-12-02 The Yearbook addresses the overriding question what are the effects of the opening up of science to the media Theoretical considerations and a host of empirical studies covering different configurations provide an in depth analysis of the sciences media connection and its repercussions on science itself They help to form a sound judgement on this recent development

Science in the Media Paul R Brewer, Barbara L Ley, 2021-09-30 This timely and accessible text shows how portrayals of science in popular media including television movies and social media influence public attitudes around messages from the scientific community affect the kinds of research that receive support and inform perceptions of who can become a scientist. The book builds on theories of cultivation, priming, framing, and media models while drawing on years of content analyses, national surveys, and experiments. A wide variety of media genres from Hollywood blockbusters and prime time television shows to cable news channels and satirical comedy programs, science documentaries, and children's cartoons to Facebook posts and YouTube videos are explored with rigorous social science research and an engaging, accessible style. Case studies on climate change, vaccines, genetically modified foods, evolution, space exploration, and forensic DNA testing are presented alongside reflections on media stereotypes and disparities in terms of gender, race, and other social identities. *Science in the Media* illuminates how scientists and media producers can bridge gaps between the scientific community and the public, foster engagement with science, and promote an inclusive vision of science while also highlighting how readers themselves can become more active and critical consumers of media messages about science. *Science in the Media* serves as a supplemental text for courses in science communication and media studies and will be of interest to anyone concerned with publicly engaged science.

Communicating Uncertainty Sharon M. Friedman, Sharon Dunwoody, Carol L. Rogers, 2012-10-12 Exploring the interactions that swirl around scientific uncertainty and its coverage by the mass media, this volume breaks new ground by looking at these issues from three different perspectives: that of communication scholars who have studied uncertainty in a number of ways, that of science journalists who have covered these issues, and that of scientists who have been actively involved in researching uncertain science and talking to reporters about it. In particular, *Communicating Uncertainty* examines how well the mass media convey to the public the complexities, ambiguities, and controversies that are part of scientific uncertainty. In addition to its new approach to scientific uncertainty and mass media interactions, this book distinguishes itself in the quality of work it assembles by some of the best known science communication scholars in the world. This volume continues the exploration of interactions between scientists and journalists that the three coeditors first documented in their highly successful volume *Scientists and Journalists Reporting Science as News*, which was used for many years as a text in science journalism courses around the world.
