On Animals David L. Clough, 2018-12-27 This book presents an authoritative and comprehensive survey of human practice in relation to other animals together with a Christian ethical analysis building on the theological account of animals which David Clough developed in On Animals Volume I Systematic Theology 2012 It argues that a Christian understanding of other animals has radical implications for their treatment by humans with the human use and abuse of non human animals for food the most urgent immediate priority Following an introduction examining the task of theological ethics in relation to non human animals and the way it relates to other accounts of animal ethics this book surveys and assesses the use humans make of other animals for food for clothing for labour as research subjects for sport and entertainment as pets or companions and human impacts on wild animals The result is both a state of the art account of what humans are doing to other animals and a persuasive argument that Christians in particular have strong faith based reasons to acknowledge the significance of the issues raised and change their practice in response

The Use of Human Beings in Research S.F. Spicker, Ilai Alon, A. de Vries, H. Tristram Engelhardt Jr., 1988-05-31 This volume which has developed from the Fourteenth Trans Disciplinary Symposium on Philosophy and Medicine September 5 8 1982 at Tel Aviv University Israel contains the contributions of a group of distinguished scholars who together examine the ethical issues raised by the advance of biomedical science and technology We are of course still at the beginning of a revolution in our understanding of human biology scientific medicine and clinical research are scarcely one hundred years old Both the sciences and the technology of medicine until ten or fifteen years ago had the feeling of the 19th century about them we sense that they belonged to an older time that era is ending The next twenty five to fifty years of investigative work belong to neurobiology genetics and reproductive biology The technologies of information processing and imaging will make diagnosis and treatment almost incomprehensible by my generation of physicians Our science and technology will become so powerful that we shall require all of the art and wisdom we can muster to be sure that they remain dedicated as Francis Bacon hoped four centuries ago to the uses of life It is well that as philosophers and physicians we grapple with the issues now when they are relatively simple and while the pace of change is relatively slow We require a strategy for the future that strategy must be worked out by scientists philosophers
