Communicating Science, Climate Change and the Environment in Hybrid Media Mette Marie Roslyng, Anna Rantasila, Anna Maria Jönsson, 2025-05-30. This volume examines how a new hybrid mediascape represents and contributes to the construction of facts and knowledge in relation to science, environment, and climate controversies, providing a new critical perspective to the burgeoning field of science and environment communication. Arguing that science must be understood from an inclusive perspective respecting public values and concerns alongside scientific arguments, the authors demonstrate how this will allow us to properly understand the role of science, truth, and factuality alongside the ethical, cultural, and political concerns about science raised in different publics. The chapters focus on the more controversial aspects of science and environmental communication: misinformation, public understandings of science, and the environmental crises: vaccination and the role of the hybrid mediascape in science, environment, and climate conflicts. Offering a much-needed interdisciplinary approach to understand the role of science of media in science and environment conflicts, this book will appeal to students and academics in the areas of media and communication, journalism, cultural studies, science, environment, and risk communication, and digital media studies, as well as sociology and political science.
