**Natural Language Data Management and Interfaces** Yunyao Li, Davood Rafiei, 2022-06-01 The volume of natural language text data has been rapidly increasing over the past two decades due to factors such as the growth of the Web the low cost associated with publishing and the progress on the digitization of printed texts This growth combined with the proliferation of natural language systems for search and retrieving information provides tremendous opportunities for studying some of the areas where database systems and natural language processing systems overlap This book explores two interrelated and important areas of overlap 1 managing natural language data and 2 developing natural language interfaces to databases It presents relevant concepts and research questions state of the art methods related systems and research opportunities and challenges covering both areas Relevant topics discussed on natural language data management include data models data sources queries storage and indexing and transforming natural language text Under naturallanguage interfaces it presents the anatomy of these interfaces to databases the challenges related to query understanding and query translation and relevant aspects of user interactions Each of the challenges is covered in a systematic way first starting with a quick overview of the topics followed by a comprehensive view of recent techniques that have been proposed to address the challenge along with illustrative examples It also reviews some notable systems in details in terms of how they address different challenges and their contributions Finally it discusses open challenges and opportunities for natural language management and interfaces The goal of this book is to provide an introduction to the methods problems and solutions that are used in managing natural language data and building natural language interfaces to databases It serves as a starting point for readers who are interested in pursuing

additional work on these exciting topics in both academic and industrial environments

**Natural Language Processing for Social Media, Third Edition** Anna Atefeh Farzindar, Diana Inkpen, 2022-05-31 In recent years online social networking has revolutionized interpersonal communication. The newer research on language analysis in social media has been increasingly focusing on the latter's impact on our daily lives both on a personal and a professional level. Natural language processing (NLP) is one of the most promising avenues for social media data processing. It is a scientific challenge to develop powerful methods and algorithms that extract relevant information from a large volume of data coming from multiple sources and languages in various formats or in free form. This book will discuss the challenges in analyzing social media texts in contrast with traditional documents. Research methods in information extraction, automatic categorization and clustering, automatic summarization and indexing, and statistical machine translation need to be adapted to a new kind of data. This book reviews the current research on NLP tools and methods for processing the non-traditional information from social media data that is available in large amounts, and it shows how innovative NLP approaches can integrate appropriate linguistic information in various fields such as social media monitoring, health care, and business intelligence. The book further covers the existing evaluation metrics for NLP and social media applications and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media. Such tasks are organized by the Association for Computational Linguistics such as SemEval, tasks the National Institute of Standards and Technology via the Text REtrieval Conference (TREC) and the Text Analysis Conference (TAC) or the Conference and Labs of the Evaluation Forum (CLEF). In this third edition of the book, the authors added information about recent progress in NLP for social media applications, including more about the modern techniques provided by deep neural networks (DNNs) for modeling language and analyzing social media data.

**Natural Language Processing** Yue Zhang, Zhiyang Teng, 2021-01-07 With a machine learning approach and less focus on linguistic details, this gentle introduction to natural language processing develops fundamental mathematical and deep learning models for NLP under a unified framework. NLP problems are systematically organized by their machine learning nature, including classification, sequence labelling, and sequence-to-sequence problems. Topics covered include statistical machine learning and deep learning models, text classification, and structured prediction models, generative and discriminative models, supervised and unsupervised learning with latent variables, neural networks, and transition-based methods. Rich connections are drawn between concepts throughout the book, equipping students with the tools needed to establish a deep understanding of NLP solutions, adapt existing models, and confidently develop innovative models of their own. Featuring a host of examples, intuition, and end-of-chapter exercises, plus sample code available as an online resource, this textbook is an invaluable tool for the upper undergraduate and graduate student.

**Knowledge and Learning in Natural Language** Charles D. Yang, 2002 It is a simple observation that children make mistakes when they learn a language. Yet to the trained eye, these mistakes are far from random; in fact, they closely resemble perfectly grammatical utterances by adults who speak other languages. This type

of error analysis suggests a novel view of language learning children are born with a fixed set of hypotheses about language Chomsky's Universal Grammar and these hypotheses compete to match the child's ambient language in a Darwinian fashion The book presents evidence for this perspective from the study of children's words and grammar and how language changes over time

**Coarse-to-Fine Natural Language Processing** Slav Petrov,2011-11-03 The impact of computer systems that can understand natural language will be tremendous To develop this capability we need to be able to automatically and efficiently analyze large amounts of text Manually devised rules are not sufficient to provide coverage to handle the complex structure of natural language necessitating systems that can automatically learn from examples To handle the flexibility of natural language it has become standard practice to use statistical models which assign probabilities for example to the different meanings of a word or the plausibility of grammatical constructions This book develops a general coarse to fine framework for learning and inference in large statistical models for natural language processing Coarse to fine approaches exploit a sequence of models which introduce complexity gradually At the top of the

sequence is a trivial model in which learning and inference are both cheap Each subsequent model refines the previous one until a final full complexity model is reached Applications of this framework to syntactic parsing speech recognition and machine translation are presented demonstrating the effectiveness of the approach in terms of accuracy and speed The book is intended for students and researchers interested in statistical approaches to Natural Language Processing Slav s work Coarse to Fine Natural Language Processing represents a major advance in the area of syntactic parsing and a great advertisement for the superiority of the machine learning approach Eugene Charniak Brown University
