Elements of Hypermedia Design: Techniques for Navigation & Visualization in Cyberspace Peter Gloor,2013-11-11 The hypermedia authoring process has been vividly described in a special issue of the Economist as a combination of writing a book a play a film and a radio or television show A hypermedia document combines all these elements and adds some of its own The author s first job is to structure and explain all of the information The author then must distill the information into brief descriptive nodes Each node has to contain a list of the ingredients and instructions on how the ingredients are mixed together to the greatest advantage The structure of the material provided is translated into an architectural metaphor of some kind much of the designer s work is the creation of this imaginary space Then the designers must chart the details of what to animate what to film who to interview and how to arrange the information in the space to be built Eco95a This book presents guidelines tools and techniques for prospective authors such that they can design better hypermedia documents and applications It surveys the different techniques used to organize search and structure information in a large information system It then describes the algorithms used to locate reorganize and link data to enable navigation and retrieval It looks in detail at the creation and presentation of certain types of visual information namely algorithm animations It introduces new mechanisms for editing audio and video data streams
