Differential Games and Applications Tamer Başar, Pierre Bernhard, 1989 This volume contains fifteen articles on the topic of differential and dynamic games focusing on both theory and applications It covers a variety of areas and presents recent developments on topics of current interest It should be useful to researchers in differential and dynamic games systems and control operations research and mathematical economics **Dynamics, Bifurcations and Control** Fritz Colonius, Lars Grüne, 2003-07-01 This volume originates from the Third Nonlinear Control Workshop namics Bifurcations and Control held in Kloster Irsee April 1 3 2001 As the preceding workshops held in Paris 2000 and in Ghent 1999 it was organized within the framework of Nonlinear Control Network funded by the European Union <http://www.supelec.fr/lss/NCN> The papers in this volume center around those control problems where phenomena and methods from dynamical systems theory play a dominant role Despite the large variety of techniques and methods present in the contributions a rough subdivision can be given into three areas Bifurcation problems stabilization and robustness and global dynamics of control systems A large part of the fascination in nonlinear control stems from the fact that is deeply rooted in engineering and mathematics alike The contributions to this volume reflect this double nature of nonlinear control We would like to take this opportunity to thank all the contributors and the referees for their careful work Furthermore it is our pleasure to thank Franchise Lamnabhi Lagarrigue the coordinator of our network for her support in organizing the workshop and the proceedings and for the tremendous efforts she puts into this network bringing the cooperation between the different groups to a new level In particular the exchange and the active participation of young scientists also reflected in the Pedagogical Schools within the Network is an asset for the field of nonlinear control **Generalized Solutions of First Order PDEs** Andrei I. Subbotin, 2013-06-29 Hamilton Jacobi equations and other types of partial differential equations of the first order are dealt with in many branches of mathematics mechanics and physics These equations are usually nonlinear and functions vital for the considered problems are not smooth enough to satisfy these equations in the classical sense An example of such a situation can be provided by the value function of a differential game or an optimal control problem It is known that at the points of differentiability this function satisfies the corresponding Hamilton Jacobi Isaacs Bellman equation On the other

hand it is well known that the value function is as a rule not everywhere differentiable and therefore is not a classical global solution Thus in this case as in many others where first order PDE s are used there arises necessity to introduce a notion of generalized solution and to develop theory and methods for constructing these solutions In the 50s 70s problems that involve nonsmooth solutions of first order PDE s were considered by Bakhvalov Evans Fleming Gel fand Godunov Hopf Kuznetsov Ladyzhenskaya Lax Oleinik Rozhdestvenski Samarskii Tikhonov and other mathematicians Among the investigations of this period we should mention the results of S N Kruzhkov which were obtained for Hamilton Jacobi equation with convex Hamiltonian A review of the investigations of this period is beyond the limits of the present book A sufficiently complete bibliography can be found in 58 126 128 141 [Mathematics of Complexity and Dynamical Systems](#) Robert A. Meyers,2011-10-05 [Mathematics of Complexity and Dynamical Systems](#) is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self organization e g the spontaneous formation of temporal spatial or functional structures These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic The more than 100 entries in this wide ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory fractals and multifractals dynamical systems perturbation theory solitons systems and control theory and related topics [Mathematics of Complexity and Dynamical Systems](#) is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers **Proceedings of the Steklov Institute of Mathematics** ,2000 **Pursuit-Evasion Differential Games** Y. Yavin,M. Pachter,1987-09-30 Twenty papers are devoted to the treatment of a wide spectrum of problems in the theory and applications of dynamic games with the emphasis on pursuit evasion differential games The problem of capturability is thoroughly investigated also the problem of noise corrupted state measurements Attention is given to aerial combat problems and their attendant modelling issues such as variable speed of the combatants the three dimensionality of physical space and the combat problem i e problems related to role determination **Library of Congress Subject Headings** Library of Congress,Library of Congress. American Control Conference ,1998 **Dynamic Economic Theory** Jean-Pierre Aubin,1997-05-20 This book is intended to provide economists with mathematical tools necessary to handle the concepts of evolution under uncertainty and adaption arising in economics pursuing the Arrow Debreu Hahn legacy It applies the techniques of viability theory to the study of economic systems evolving under contingent uncertainty faced with scarcity constraints and obeying various implementation of the inertia principle The book illustrates how new tools can be used to move from static analysis built on concepts of optima equilibria and attractors to a contingent dynamic framework
