Between Two Disciplines Martina R. Schneider, 2025-12-09 This book offers a historical analysis of Bartel Leendert van der Waerden's early contributions to quantum mechanics in particular focusing on his role in the development and application of group-theoretic methods around 1930 While van der Waerden is widely known for his modern algebra his engagement with quantum theory has received little attention in the historical literature Through careful study of published and archival sources the author reconstructs the contexts in which van der Waerden worked and examines his networks as well as his interactions with contemporaries such as Hermann Weyl Eugene Wigner Paul Ehrenfest and John Slater By comparing the different emerging approaches of adapting group-theoretic methods to problems in quantum mechanics the author shows that van der Waerden stands out as a rather pragmatic and undogmatic thinker Special attention is given to reconstructing a more nuanced picture of the arising controversy around the group plague in quantum mechanics Combining technical exposition with biographical and historical analysis the book is intended for mathematicians physicists and historians of science The reader is expected to have beginning graduate-level knowledge of mathematics mainly algebra and in particular representation theory as well as some background in quantum physics The study sheds light on a complex and fascinating period in the development of mathematical physics It explores the dynamics of the interactions between mathematics and physics and thus contributes to ongoing discussions about mathematization processes in science in the twentieth century

Modern Computational Approaches to Traditional Chinese Medicine Zhaohui Wu, Huajun Chen, Xiaohong Jiang, 2012-07-16 Recognized as an essential component of Chinese culture Traditional Chinese Medicine TCM is both an ancient medical system and one still used widely in China today TCM's independently evolved knowledge system is expressed mainly in the Chinese language and the information is frequently only available through ancient classics and confidential family records making it difficult to utilize The major concern in TCM is how to consolidate and integrate the data enabling efficient retrieval and discovery of novel knowledge from the dispersed data Computational approaches such as data mining semantic reasoning and computational intelligence have emerged as innovative approaches for the reservation and utilization of this knowledge system Typically this requires an inter-disciplinary approach involving Chinese culture computer science modern healthcare and life sciences This book examines the computerization of TCM information and knowledge to provide intelligent resources and supporting evidences for clinical decision making drug discovery and education Recent research results from the Traditional Chinese Medicine Informatics Group of Zhejiang University are presented gathering in one resource systematic approaches for massive data processing in TCM These include the utilization of modern Semantic Web and data mining methods for more advanced data integration data analysis and integrative knowledge discovery This book will appeal to medical professionals life sciences students computer scientists and those interested in integrative complementary and alternative medicine Interdisciplinary book bringing together Traditional

Modern Statistical Methods for Health Research Yichuan Zhao,(Din) Ding-Geng Chen,2021-10-14 This book brings together the voices of leading experts in the frontiers of biostatistics biomedicine and the health sciences to discuss the statistical procedures useful methods and novel applications in biostatistics research It also includes discussions of potential future directions of biomedicine and new statistical developments for health research with the intent of stimulating research and fostering the interactions of scholars across health research related disciplines Topics covered include Health data analysis and applications to EHR data Clinical trials FDR and applications in health science Big network analytics and its applications in GWAS Survival analysis and functional data analysis Graphical modelling in genomic studies The book will be valuable to data scientists and statisticians who are working in biomedicine and health other practitioners in the health sciences and graduate students and researchers in biostatistics and health

Algebraic and Discrete Mathematical Methods for Modern Biology Raina Robeva,2015-05-09 Written by experts in both mathematics and biology Algebraic and Discrete Mathematical Methods for Modern Biology offers a bridge between math and biology providing a framework for simulating analyzing predicting and modulating the behavior of complex biological systems Each chapter begins with a question from modern biology followed by the description of certain mathematical methods and theory appropriate in the search of answers Every topic provides a fast track pathway through the problem by presenting the biological foundation covering the relevant mathematical theory and highlighting connections between them Many of the projects and exercises embedded in each chapter utilize specialized software providing students with much needed familiarity and experience with computing applications critical components of the modern biology skill set This book is appropriate for mathematics courses such as finite mathematics discrete structures linear algebra abstract modern algebra graph theory probability bioinformatics statistics biostatistics and modeling as well as for biology courses such as genetics cell and molecular biology biochemistry ecology and evolution Examines significant questions in modern biology and their mathematical treatments Presents important mathematical concepts and tools in the context of essential biology Features material of interest to students in both mathematics and biology Presents chapters in modular format so coverage need not follow the Table of Contents Introduces projects appropriate for undergraduate research Utilizes freely accessible software for visualization simulation and analysis in modern biology Requires no calculus as a prerequisite Provides a complete Solutions Manual Features a companion website with supplementary resources

Sreelatha,Varghese Jacob,2021-04-12 This book highlights the review of articles in theoretical physics by the students of Professor K Babu Joseph as a Festschrift for his 80th Birthday This book is divided into four sections based on the contributions of Babu Joseph and his students The four sections are Cosmology High Energy Physics

Mathematical Physics and Non linear Dynamics and its applications Modern Trends in Controlled Stochastic Processes
Alexey B. Piunovskiy,2010-09 World leading experts give their accounts of the modern mathematical models in the field
Markov Decision Processes controlled diffusions piece wise deterministic processes etc with a wide range of performance
functionals One of the aims is to give a general view on the state of the art The authors use Dynamic Programming Convex
Analytic Approach several numerical methods index based approach and so on Most chapters either contain well developed
examples or are entirely devoted to the application of the mathematical control theory to real life problems from such fields
as Insurance Portfolio Optimization and Information Transmission The book will enable researchers academics and research
students to get a sense of novel results concepts models methods and applications of controlled stochastic processes

Topics in Classical and Modern Analysis Martha Abell,Emil Iacob,Alex Stokolos,Sharon Taylor,Sergey

8,9,10 ,1975 A New Economics for Modern Dynamic Economies Angelo Fusari,2016-10-04 It is becoming increasingly
clear that a new economics is required for investigating modern dynamic economies and the coming social world Important
features of those economies such as innovation uncertainty and entrepreneurship are usually considered capitalist features
This may have been true historically but this book argues that the contrary will be true for the future the full and efficient
operation of those supposed capitalist features will increasingly require the overcoming of capitalist civilization In this book
Angelo Fusari constructs a theoretical framework for the interpretation and management of modern dynamic economies
which demonstrates that institutional transformations are essential if we are to move beyond the current consumer capitalist
age and the age of the domination of financial capital A New Economics for Modern Dynamic Economies opens with a
consideration of the basic aspects of modern dynamic economies and proceeds to develop a representation of the whole
economic system centred on the interrelationships between entrepreneurship innovation and radical uncertainty in a
dynamic competition process This model provides an explanation of business cycles that largely differs from current
explanations as it derives from the notion of dynamic competition The book is then extended from the sectoral to the micro
level and then to the level of the firm The second half of the book is concerned with operational problems and in particular
with the integration of this analysis of cycles with the notion of historical phases of development The final chapter explores
the route of the transition from capitalism to a new economic and social order a transition of vital importance both for the
contemporary world and for the coming world This volume is of great interest to those who study political economy

macroeconomics and economic theory and philosophy The book shows the possibility of a scientific explanation of important ethical principles as indispensable to the organizational efficiency of the social system for instance the necessity and the way to conciliate productive efficiency social justice and individual freedom
