from *Laws of Physical Science* A Reference Book Exact knowledge consists of accumulated facts and sets of formulated
propositions respecting facts Data Mathematical relations and Physical laws constitute the three firm supports of Physical
science and Engineering The data of physical science are readily accessible in several published tables of physical constants
The mathematics used in physical science has been summarized classified and formulated for ready reference in many
published books The author is not aware however of any hand book or reference work which contains a full list of the general
propositions or laws of science Such reference lists are not without value and this book has been prepared to fill an obvious
gap in the literature of Physical Science Furthermore it appears to the author that students in any of the branches of Natural
Science will not only find guidance but will also derive inspiration by having before them under a single view the very
epitome of the worlds heritage of the fundamentals of its knowledge and wisdom None will question that the fundamentals of
science are its laws principles theorems and precise statements of the general properties of matter but it is not always easy
for students in one branch of science to find and to know the literature on important principles and facts in an entirely
different or even in closely allied branches of science The author hopes that what has been here gathered together and
classified will help such students in their search and give them the means to broaden their view About the Publisher
