

Experiment-02

Aim :- To find resistance of a given wire / standard resistor using metre bridge.

Apparatus Required :- A metre bridge, A Leclanche cell (battery eliminator), A galvanometer, A resistance box, A jockey, A one-way key, A resistance wire, A metre scale, A set square, Connecting wires, A piece of sandpaper

Theory :-

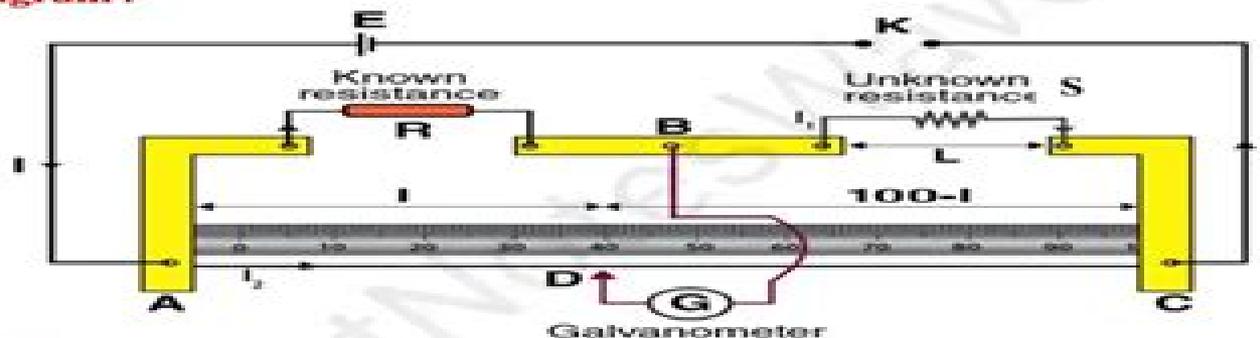

Metre bridge apparatus is also known as a slide wire bridge. It is fixed on the wooden block and consists of a long wire with a uniform cross-sectional area. It has two gaps formed using thick metal strips to make the Wheatstone's bridge.

Then according to Wheatstone's principle, we have:

$$\frac{R}{S} = \frac{l}{(100-l)} \quad \text{or} \quad S = \frac{(100-l)}{l} \times R$$

Where, R is known resistance placed in the left gap and unknown resistance S in the right gap of metre bridge. l cm is the length of metre bridge wire from zero end upto balance point.

Circuit Diagram :-

Procedure :-

1. The arrangement of the apparatus should be as shown in the circuit diagram.
2. The wire whose resistance is to be determined should be connected in the right gap between C and B without any formation of loops.
3. The resistance box should be connected in the left gap between A and B.
4. All the other connections should be as shown in the circuit diagram.
5. take out some resistance (say 2-ohm) from the resistance box. Plug the key K.
6. The jockey should be first touched gently to the left end and then to the right end of the bridge.
7. The deflections in the galvanometer should be in opposite directions and if it is in one direction then the circuit connections are not correct. Note the galvanometer deflection.
8. Let D be the null point where the jockey is touching the wire. The movement of the jockey should be gentle from left to the right of the galvanometer.
9. Choose an appropriate value of R from resistance box such there is no deflection in the galvanometer when the jockey is nearly in the middle of the wire (i.e. between 30 cm to 70 cm)
10. Note the position of D to know the length of $AD = l$.
11. Four sets of observations should be taken by changing the value of R.
12. Record the observations in a tabular form.
