Numerical Methods for Elliptic Problems with Singularities Zi-Cai Li, 1990 This book presents two kinds of numerical methods for solving elliptic boundary value problems with singularities Part I gives the boundary methods which use analytic and singular expansions and Part II the nonconforming methods combining finite element methods FEM or finite difference methods FDM and singular or analytic expansions The advantage of these methods over the standard FEM and FDM is that they can cope with complicated geometrical boundaries and boundary conditions as well as singularity Therefore accurate numerical solutions near singularities can be obtained The description of methods error bounds stability analysis and numerical experiments are provided for the typical problems with angular interface and infinity singularities However the approximate techniques and coupling strategy given can be applied to solving other PDE and engineering problems with singularities as well This book is derived from the author's Ph D thesis which won the 1987 best doctoral dissertation award given by the Canadian Applied Mathematics Society

Solving Elliptic Problems Using ELLPACK John R. Rice,Ronald F. Boisvert,2012-12-06 ELLP ACK is a many faceted system for solving elliptic partial differential equations It is a forerunner of the very high level problem solving environments or expert systems that will become common in the next

decade While it is still far removed from the goals of the future it is also far advanced compared to the Fortran library approach in common current use Many people will find ELLPACK an easy way to solve simple or moderately complex elliptic problems Others will be able to solve really hard problems by digging a little deeper into ELLPACK ELLPACK is a research tool for the study of numerical methods for solving elliptic problems Its original purpose was for the evaluation and comparison of numerical software for elliptic problems Simple examples of this use are given in Chapters 9 11 The general conclusion is that there are many ways to solve most elliptic problems there are large differences in their efficiency and the most common ways are often less efficient sometimes dramatically so
