**Pollution in Tropical Aquatic Systems** Des W. Connell, 2018-05-04 We have identified a need to draw together knowledge of physiochemical and biological aspects of pollution in tropical aquatic systems This book results from this and we hope will assist in providing management strategies to protect these systems from pollution effects In organising the book we have as far as possible attempted to cover the range of topics important in understanding pollution in tropical areas Authors who are expert in their particular fields have been invited to contribute We recognise that many topics remain uncovered but we hope will serve to assist in identifying these and stimulate interest in this area *Practical Handbook of Estuarine and Marine Pollution* Michael J. Kennish, 2017-12-14 This extensive handbook presents up to date coverage of significant developments in estuarine and marine pollution Multidisciplinary in approach Practical Handbook of Estuarine and Marine Pollution is an essential resource for anyone involved in the study or management of coastal and marine pollution problems The book examines in detail anthropogenic effects on estuarine and marine ecosystems from local regional and global perspectives A truly international collection of data is presented in an organized framework on a wide range of subject areas including eutrophication organic loading oil pollution polycyclic aromatic hydrocarbons halogenated hydrocarbons trace metals radioactive waste dredging and dredged spoil disposal and effects of electric generating stations Whether you are a student a scientist a policy maker or an administrator you no longer need to spend countless hours rounding up information and data Practical Handbook of Estuarine and Marine Pollution has already done it for you **Asia-Pacific Symposium on Mangrove Ecosystems** Yuk-Shan Wong, Nora F.Y. Tam, 2012-12-06 Mangrove ecosystems are typical formations found in coastal deposits of mud and silt throughout the tropics and some distance into the subtropical latitudes The total worldwide mangrove area which is estimated at about 170 000 km<sup>2</sup> with some sixty species of trees and shrubs exclusive to the habitat dominates approximately 75% of the world's coastline between latitudes 25 N and 25 S Such unique intertidal ecosystems support genetically diverse communities of terrestrial and aquatic organisms that are of direct or indirect socioeconomic values Mangrove forests play important roles as coastal stabilization and protection against winds and storms producers of nutrients forest resources and animal species of economic importance Recently the issues on the conservation proper utilization and management of mangrove forests have been widely discussed Unfortunately overexploitation and destruction of mangroves seriously threatens the sustainability of such a unique ecosystem This volume includes papers on three main areas recent advances in mangrove ecology application and utilization of mangrove resources and conservation and management of the ecosystems [Water Management and Protection of the Aquatic Living Resources in Tropical and Sub-tropical Climates](#) Lars Landner, 1985 *Bibliography of Agriculture with Subject Index*, 1993-11 *The Ecology of Tropical Lakes and Rivers* A.
