Macromolecules provides a broad survey of the entire subject integrated representations of chemistry physics and technology precise descriptions and definitions of basic phenomena and balanced treatments of facts and theory The book series thus intends to bridge the gap between introductory textbooks and the highly specialized texts and monographs that cover only part of polymer science and technology Volume I is concerned with the fundamentals of chemical structure and principles of synthesis of macromolecules constitution configuration conformation polymerization equilibria polymerization mechanisms ionic coordination free radical step reactions including solid state and biochemical polymerizations polymer reactions and strategies for defined polymer architectures Volume II discusses individual polymers and their industrial syntheses Volume III the fundamentals of physical structures and properties and Volume IV the processing and application of polymers as plastics fibers elastomers thickeners etc The world of macromolecules in a nutshell Encyclopaedic Dictionary of Commercial Polymer Blends L. A. Utracki, 1994 Polymer blending is nearly as old as the polymers themselves However the literature dedicated to this technology is relatively recent and primarily focused on the academic aspects of polymer blends It seems that there is a dichotomy of efforts On one hand annually the industry generates about 30 million tons of blends and on the other academia produces over 10 000 publications dedicated mainly to studies of model systems The Encyclopedic Dictionary discusses blends available in the world market The information comes directly from manufacturers
