Moayad N. Khalaf,Michael Olegovich Smirnov,Porteen Kannan,A. K. Haghi,2020-10-28 The crucial interdependence between humans and their environment is explored and illuminated in this revealing overview of the major environmental issues facing society in the twenty first century This volume presents a novel picture of some of the current advances in the research of theoretical and practical frameworks of environmental problems and solutions taken from the latest empirical findings This new volume focuses on the aspects of new techniques that are particularly valuable for solving environmental problems The complex environmental issues are presented in simple terms to help readers grasp the basics and solve relevant problems Timely and comprehensive discussions of applications to real world environmental concerns are a central focus of this research oriented volume *Stabilisers for Polyolefins* C. Krohnke,F. Werner,2001 This review describes the main types of stabilisers with the focus on those categories for polyolefins It also elucidates some of the physical and chemical aspects of such products when incorporated into the polymer matrix discussing stability during weathering heat ageing and processing The review is supported by several hundred relevant abstracts selected from the Polymer Library *Polymers in*

Polymer Chemistry Andrew J. Peacock, Allison R. Calhoun, 2006 This book provides a comprehensive introduction to the study of polymers. Special emphasis is given to the characteristics that set polymers apart from small molecules as studied in classic chemistry courses. The various branches of polymer science are introduced and discussed in a systematic manner starting from basic chemical structures continuing through supermolecular organization and physical properties. Specific examples are used throughout to illustrate how end usage relates to the principles under discussion. A series of chapters is devoted to case studies describing the principal classes of synthetic polymers.      *Polymer Materials* Christopher Hall, 1989 A broad survey of the materials science of polymers now in a thoroughly updated new edition. Extra information has been added on polymer properties and applications. Nomenclature for polymers is discussed in an appendix following BSI and ASTM recommendations.      **Degradable Polymers and Materials** Kishan C. Khemani, Carmen Scholz, 2006 This book is an excellent guide to biobased and biodegradable polymeric materials. It summarizes current knowledge on polymer degradation mechanisms and provides insight into recent state of the art syntheses of bio degradable polymers. The book captures the shift that is currently observed in polymer industries which takes the industry from a strict petroleum based business to an industry that starts to incorporate biobased raw materials and seeks actively to manufacture materials that are environmentally benign. The book describes various aspects of current polymer research with special emphasis on natural polymers syntheses and modifications of polyesters and characterization technologies that allow to elucidate degradation mechanisms. The understanding of polymer degradation is not limited anymore to hydrolytic processes this book captures new approaches to the degradation of plastic materials ranging from photodegradation to the regulation of genes of polymer degrading microorganisms. A profound part of the book is dedicated to poly lactic acid a polymer that is now produced in large scale from renewable resources the modification copolymerization application and engineering of this material is discussed in detail and a comprehensive review is provided.      *Memoirs of the Scientific Sections of the Academy of the Socialist Republic of Romania*, 1997      *Transactions of the American Nuclear Society*, 1985      **Chemical Engineering Progress**, 1982      **Positron Annihilation** Zsolt Kajcsos, Csaba Szeles, 1992 The volumes present over 400 reviewed papers on the present state of the art and future prospects in the wide field of research involving positrons. The foreword by Edward Teller and the summaries by Jean Charles Abbe Chemistry and Alfred Seeger Physics demonstrate how the field is seen from outside and from inside.
