## **Polystochastic Models In Chemical Engineering:**

Polystochastic Models in Chemical Engineering Octavian Iordache, 1987 Polystochastic models describe systems whose mode of evolution varies randomly according to the rule given by a hierarchy of conditioning processes The author discusses the models used for random flow the dynamics of dispersed systems real flow and turbulent mixing Attention is focussed on the fundamental role played by polystochastic models in chemical engineering The author also draws attention to other areas of application such as the optimization of stochastic systems dynamic programming and decision sciences adaptive systems communications and biophysics

**Implementing Polytope Projects for Smart Systems** Octavian Iordache, 2017-01-25 This book presents a domain of extreme industrial and scientific interest the study of smart systems and structures It presents polytope projects as comprehensive physical and cognitive architectures that support the investigation fabrication and implementation of smart systems and structures These systems feature multifunctional components that can perform sensing control and actuation In light of the fact that devices tools methodologies and organizations based on electronics and information technology for automation specific to the third industrial revolution are increasingly reaching their limits it is essential that smart systems be implemented in industry Polytope projects facilitate the utilization of smart systems and structures as key elements of the fourth industrial revolution The book begins by presenting polytope projects as a reference architecture for cyber physical systems and smart systems before addressing industrial process synthesis in Chapter 2 Flow sheet trees cyclic separations and smart configurations for multi component separations are discussed here In turn Chapter 3 highlights periodic features for drug delivery systems and networks of chemical reactions while Chapter 4 applies conditioned random walks to polymers and smart materials structures Chapter 5 examines self assembly and self reconfiguration at different scales from molecular to micro systems Smart devices and technologies are the focus of chapter 6 Modular micro reactor systems and timed automata are examined in selected case studies Chapter 7 focuses on inferential engineering designs concept knowledge relational concept analysis and model driven architecture while Chapter 8 puts the spotlight on smart manufacturing industry 4 0 reference architectures and models for new product development and testing Lastly Chapter 9 highlights the polytope projects methodology and the prospects for smart systems and structures Focusing on process engineering and mathematical modeling for the fourth industrial revolution the book offers a unique resource for engineers scientists and entrepreneurs working in chemical biochemical pharmaceutical materials science or systems chemistry students in various domains of production and engineering and applied mathematicians

*Modeling Multi-Level Systems* Octavian Iordache, 2011-02-07 This book is devoted to modeling of multi level complex systems a challenging domain for engineers researchers and entrepreneurs confronted with the transition from learning and adaptability to evolvability and autonomy for technologies devices and problem solving methods Chapter 1 introduces the multi scale and multi level systems and highlights their presence in different domains of science and technology Methodologies as random systems non

Archimedean analysis category theory and specific techniques as model categorification and integrative closure are presented in chapter 2 Chapters 3 and 4 describe polystochastic models PSM and their developments Categorical formulation of integrative closure offers the general PSM framework which serves as a flexible guideline for a large variety of multi level modeling problems Focusing on chemical engineering pharmaceutical and environmental case studies the chapters 5 to 8 analyze mixing turbulent dispersion and entropy production for multi scale systems Taking inspiration from systems sciences chapters 9 to 11 highlight multi level modeling potentialities in formal concept analysis existential graphs and evolvable designs of experiments Case studies refer to separation flow sheets pharmaceutical pipeline drug design and development reliability management systems security and failure analysis Perspectives and integrative points of view are discussed in chapter 12 Autonomous and viable systems multi agents organic and autonomic computing multi level informational systems are revealed as promising domains for future applications Written for engineers researchers entrepreneurs and students in chemical pharmaceutical environmental and systems sciences engineering and for applied mathematicians

**Mathematical Modelling Techniques** Rutherford Aris,2012-06-29 Engaging elegantly written Applied Mathematical Modelling Mathematical modelling is a highly useful methodology designed to enable mathematicians physicists and other scientists to formulate equations from a given nonmathematical situation In this elegantly written volume a distinguished theoretical chemist and engineer sets down helpful rules not only for setting up models but also for solving the mathematical problems they pose and for evaluating models The author begins with a discussion of the term model followed by clearly presented examples of the different types of models finite statistical stochastic etc He then goes on to discuss the formulation of a model and how to manipulate it into its most responsive form Along the way Dr Aris develops a delightful list of useful maxims for would be modellers In the final chapter he deals not only with the empirical validation of models but also with the comparison of models among themselves as well as with the extension of a model beyond its original domain of validity Filled with numerous examples this book includes three appendices offering further examples treated in more detail These concern longitudinal diffusion in a packed bed the coated tube chromatograph with Taylor diffusion and the stirred tank reactor Six journal articles a useful list of references and subject and name indexes complete this indispensable well written guide A most useful readable and stimulating book to be read both for pleasure and for enlightenment Bulletin of the Institute of Mathematics and Its Applications

**Evolvable Designs of Experiments** Octavian Iordache,2009-02-17 Adopting a groundbreaking approach the highly regarded author shows how to design methods for planning increasingly complex experiments He begins with a brief introduction to standard quality methods and the technology in standard electric circuits The book then gives numerous examples of how to apply the proposed methodology in a series of real life case studies Although these case studies are taken from the printed circuit board industry the methods are equally applicable to other fields of engineering

**Roads to Higher Dimensional Polytopic Projects** Octavian

Iordache,2022-08-18 High dimensional reference architectures presented here allows confronting and prevailing over the growing complexity of polytopic projects implementations Such projects should be envisaged giving that conventional systems operations equipments methodologies or organizations will reach their limits for self evolvability in high complexity conditions Self evolvable high complexity systems are based on high dimensional polytopic reference architectures Polytope is the general term of the sequence point line polygon polyhedron and so on The polytopic projects are targeting the artificiality not only for materials where it is well known and applied but also for biological cognitive intelligent and mathematical systems The book highlights the polytopic projects basic similarity despite the noticeable difference as domains of application The roads to follow and the algebra of changing roads are emphasized The book is divided in 9 chapters Chapter 1 introduces the Polytopic Roadmap to 4D and beyond The role for the dialogue of processes in duality of the non Aristotelian Logic of Contradiction and of Included Middle is emphasized for different domains Chapter 2 refers to chemical systems Supramolecular chemistry metal organic frameworks MOF and reaction networks are the examples considered in the frame of polytopic chemistry Chapter 3 refers to biological systems Biological dynamical hierarchies and quasi species are the considered case studies Technological and scientific projects targeting artificiality for cells and viruses are considered Chapter 4 refers to cognitive systems Developmental stages formal and relational concepts analysis and neural coding are considered here The roles of the 4D systems of systems of systems and of conceptual 4D cube are emphasized Artificiality for cognitive systems is the object of study Chapter 5 refers to mathematical systems Modeling levels and the 4D digital twins are discussed Hopf monoids as tools for the study of combinations and separations dual graded graphs and V models are informally presented Chapter 6 refers to application of formal concept analysis FCA for high dimensional separations nesting and drug delivery Chapter 7 refers to polytopic engineering systems as multiscale transfer distributors collectors cyclic operations middle vessel columns mixing assembly and designs Equipments have been characterized using Polytopic Roadmaps and classified by Periodic Tables Chapter 8 introduces polytopic industry economy society and sustainability Chapter 9 outlines new domains of interest as arts and architecture transdisciplinarity complex systems and unity of sciences and engineering Polytopic Roadmaps are proposed as Method for experts from various fields to synthesize their thinking and capabilities into new projects implementation to face and surpass high complexity A repetitive finding of this book is that self evolvability observed in physical systems is based on the same directed sequence of reference architectures as the self evolvability of concepts in our mind Continuing to develop the field of self evolvable systems and presenting the polytopic roadmaps for 4D and beyond advances in ever growing complexity domains the book will be useful to engineers researchers entrepreneurs and students in different branches of production complex systems sciences and engineering ecology and applied mathematics
