A Pathway into Number Theory R. P. Burn, 1982-03-04 This book leads readers from simple number work to the point where they can prove the classical results of elementary number theory for themselves Copyright Libri GmbH All rights reserved

A Pathway Into Number Theory R. P. Burn, 1996-11-28 Number theory is concerned with the properties of the natural numbers 1 2 3 During the seventeenth and eighteenth centuries number theory became established through the work of Fermat Euler and Gauss With the hand calculators and computers of today the results of extensive numerical work are instantly available and the road leading to their discoveries may be traversed with comparative care Now in its second edition this book consists of a sequence of exercises that will lead readers from quite simple number work to the point where they can prove algebraically the classical results of elementary number theory for themselves A modern secondary school course in mathematics is sufficient background for the whole book which is designed to be used as an undergraduate course in number theory to be pursued by independent study without supporting lectures

Numbers and Functions R. P. Burn, 2015-02-19 A revised and updated edition providing hundreds of exercises to help students gradually transition from school to university level calculus

Numbers, Sequences and Series Keith Hirst, 1994-12-08 Number and geometry are the foundations upon which mathematics has been built over some 3000 years This book is concerned with the logical foundations of number systems from integers to complex numbers The author has chosen to develop the ideas by illustrating the techniques used throughout mathematics rather than using a self contained logical treatise The idea of proof has been emphasised as has the illustration of concepts from a graphical numerical and algebraic point of view Having laid the foundations of the number system the author has then turned to the analysis of infinite processes involving sequences and series of numbers including power series The book also has worked examples throughout and includes some suggestions for self study projects In addition there are tutorial problems aimed at stimulating group work and discussion

Lumen Naturae Matilde Marcolli, 2020-05-26 Exploring common themes in modern art mathematics and science including the concept of space the notion of randomness and the shape of the cosmos This is a book about art and a book about mathematics and physics In *Lumen Naturae* the title refers to a purely immanent non supernatural form of enlightenment mathematical physicist Matilde Marcolli explores common themes in modern art and modern science the concept of space the notion of randomness the shape of the cosmos and other puzzles of the universe while mapping convergences with the work of such artists as Paul Cezanne Mark Rothko Sol LeWitt and Lee Krasner Her account focusing on questions she has investigated in

her own scientific work is illustrated by more than two hundred color images of artworks by modern and contemporary artists Thus Marcolli finds in still life paintings broad and deep philosophical reflections on space and time and connects notions of space in mathematics to works by Paul Klee Salvador Dal and others She considers the relation of entropy and art and how notions of entropy have been expressed by such artists as Hans Arp and Fernand L ger and traces the evolution of randomness as a mode of artistic expression She analyzes the relation between graphical illustration and scientific text and offers her own watercolor decorated mathematical notebooks Throughout she balances discussions of science with explorations of art using one to inform the other She employs some formal notation which can easily be skipped by general readers Marcolli is not simply explaining art to scientists and science to artists she charts unexpected interdependencies that illuminate the universe
