Phantom Pain:

Phantom Pain Richard A. Sherman, 1996-11-30 Phantom pain is an intriguing mystery that has captured the imagination of health care providers and the public alike How is it possible to feel pain in a limb or some other body part that has been surgically removed Phantom pain develops among people who have lost a limb or a breast or have had internal organs removed It also occurs in people with totally transected spinal cords Unfortunately phantom pain is a medical night mare Many of the people reporting phantom pain make disproportionately heavy use of the medical system because their severe pains are usually not treated successfully The effect on quality of life can be devastating Phantom pain has been reported at least since 1545 Weir Mitchell as related by Nathanson 1988 and or experienced by such diverse people as Admiral Lord Nelson and Ambroise Pare Melzack Davis 1993 The folklore surrounding phantom pain is fascinating and mirrors the concepts about how our bodies work that are in vogue at any particular time Most of the stories relate to phantom limbs and date from the mid 1800s The typical story goes like this A man who had his leg amputated complained about terrible crawling twitching feelings in his leg His friends found out where the leg was buried dug it up and found maggots eating it They burned it and the pain stopped Another man complained of a swollen feeling with frequent stinging or biting pains

Phantom and Stump Pain J. Siegfried,M. Zimmermann,2012-12-06 The phenomenon of phantom limb was described in medical literature at least as early as 1545 by Ambroise Pare according to the notes in the translation of Lemos dissertation On the Continuing Pain of an Amputated Limb by Price and Twombly 9 This strange experience was brought to public attention by a popular essay anonymously published 1866 by Mitchell concerning the story of George Dedlow a quadriamputee who described his invisible limbs 7 In 1871 Mitchell wrote under his own name and was the first to use the term phantom limb 8 In this work he also corrected some erroneous beliefs that had arisen from his 1866 essay 13 Most amputees report feeling a phantom limb almost immediately after amputation of an arm or a leg 11 It is a positive sensation usually described as tingling or numbness which is not painful The most distal parts of the limb particularly the digits thumb and index are the strongest and most persisting phantom sites and may be the only parts to appear even after removal of a whole limb The elbow or knee is sometimes involved the forearm or lower leg rarely and the upper arm and thigh almost
