Oncogene Handbook:

The Oncogene Handbook Robin Hesketh, 1994 In recent years there has been an audible clamour for a comprehensive digest of the vast and exciting literature on the molecular biology of cancer The Oncogene Handbook fulfills this need providing a definitive guide to the facts about the genes involved in cancer This compendium summarizes the clinical association and molecular properties of all known oncogenes and tumour suppressor genes providing instant access to information on any particular facet of the gene of protein Data covering gene structure and location mRNA size and the half life mass cellular and tissue location protein structure and function sequence databank file name and accession number is clearly and logically presented This vital reference work will provide the understanding that will fuel further progress in this field and will be an invaluable resource for research workers and clinicians as well as senior undergraduates and pre clinical students with an interest in carcinogenesis Robin Hesketh is a member of the Department of Biochemistry University of Cambridge where his principal research interest is in the control of eukaryotic cell growth He was previously a staff member of the National Institute for Medical Research London and has also worked in North America Australia and at the European Molecular Biology Laboratory at Heidelberg

The Oncogene Handbook E. Premkumar Reddy, Anna M. Skalka, Tom Curran, 1988 The field of Molecular Oncology has emerged in the last decade as an amalgamation of four of the foremost disciplines in cancer research retrovirology chemical carcinogenesis cytogenetics and cell growth regulation The subject matter for this book forms the unifying factor for these four areas Although the field of Molecular Oncology is still comparatively young the technical vocabulary can be bewildering to the uninitiated This book is clear in its divisions grouping oncogenes by biochemical activity or cellular localization the large group of tyrosine kinases are compared by relevant features The Oncogene Handbook allows ready access and supplies excellent cross referencing An outstanding reference work giving basic information on each oncogene in a concise and uniform format The fundamental importance of the subject area and its medical implications both reflected in The Oncogene Handbook provide students scientists in other fields and clinicians with a very useful manual

The Oncogenomics Handbook William J. LaRochelle, Richard A. Shimkets, 2007-11-09 An integrated overview of cancer drug discovery and development from the bench to the clinic showing with broad strokes and representative examples the drug development process as a network of linked components leading from the discovered target to the ultimate therapeutic product Following a systems biology approach the authors explain genomic databases and how to discover oncological targets from them how then to advance from the gene and transcript to the level of protein biochemistry how next to move from the chemical realm to that of the living cell and ultimately pursue animal modeling and clinical development Emerging cancer therapeutics including Ritux an Erbitux Gleevec Herceptin Avastin ABX EGF Velcade Kepivance Iressa Tarceva and Zevalin are addressed Highlights include cancer genomics pharmacogenomics transcriptomics gene expression analysis proteomic and enzymatic cancer profiling technologies and

cellular and animal approaches to cancer target validation *The Oncogene Factsbook* Robin Hesketh,1995-01-01 The Oncogene FactsBook is a condensed version of the Oncogene Handbook in the FactsBook Series format The key information on oncogenes tumor viruses and tumor suppressor genes has been selected from the Handbook and arranged in the series style to that the essential information is readily accessible The introduction summarizes the principal developments in our understanding of oncogenes the present position with regard to gene therapy for human cancers and discusses patterns of oncogene expression in human tumors Chapter 2 contains tables of the major categories of oncogenes that include a summary of the properties of those oncogenes which do not have individual sections Chapter 3 covers the individual oncogenes in a constant format for each entry DNA tumor viruses and tumor suppressor genes are considered separately in two sections The minimum number of references has been included in order to give the reader rapid access to the literature in the key areas of structure and function of each gene and its product The emphasis has thus been placed on listing the most up to date references rather than an extensive bibliography The Oncogene FactsBook contains more than 60 entries on oncogenes including JUN MAS MYC MAX and RAS as well as DNA tumor viruses tumor suppressor genes and essential introductory material Individual Oncogene Entries include Identification Related genes Chromosomal Location and Mass Cellular Location Tissue Distribution Protein function Cancer Amino acid Sequence Domain structure Database accession numbers Key references Oncogenes Geoffrey M. Cooper,1995 The second edition of this authoritative text details major advances and developments in the field such as the identification of many new tumor suppressor genes and the striking progress in understanding signal transduction pathways leading to cell proliferation Oncogenes Second Edition addresses the needs of advanced undergraduates graduate students medical students physicians and scientists by examining the current state of oncogene study and where future research may lead Fields' Virology David Mahan Knipe,Peter M. Howley,2007 Accompanying CD ROM has same title as book *Oncogenes in Cancer Diagnosis* C. R. Bartram,K. Munk,M. Schwab,1990-09-20 *Published Scientific Papers of the National Institutes of Health* National Institutes of Health (U.S.),1990 **Chemical Induction of Cancer** Joseph C. Arcos,Mary F. Argus,Yin-tak Woo,2012-12-06 In the approach to the analysis of disease including of course cancer two major thrusts may be distinguished These may be referred to in shorthand as agents and processes the causative agents chemical microbial physical environmental and psychosocial and the organismic processes initiated and furthered by the agents culminating in observable pathology at the macromolecular cytological histological organ function locomotor and behavioral levels The past 25 years since the appearance of the first volume of the predecessor series 1 authored by the Editors of this present volume have seen an impressive number of studies on chemicals and other agents as etiologic factors in the induction of cancer The major emphasis has been on the discovery of many chemical carcinogens of widely different structures their metabolism by various tissues and cells and in turn their molecular biochemical effects on the cells This rapidly expanded body of information is effectively covered in the

predecessor volumes is an excellent entree to the second half of the overall problem of chemical carcinogenesis the processes The active agents trigger a large array of molecular biochemical alterations to which the target cells target tissues and target organisms respond in many select and common ways This second major aspect of the induction of cancer by chemicals and by other agents the sequence of cellular and tissue changes clearly relevant to cancer remains the challenge for the future

Peptide Growth Factors and Their Receptors II Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone to stay informed on this subject by reading the possible for At the same time it is becoming increasingly apparent that primary literature these substances are of universal importance in biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research
