Strong Medicine Paul T. Menzel, 1990 In one form or another health care now gets rationed Not everything beneficial is done for every patient For the individual the consequences are sometimes tragic Rationing decisions thus raise a classic dilemma how can we treat with dignity and genuine respect the person who gets short changed by an efficient policy that seems best overall Strong Medicine argues that we can if those policies represent the hard trade off preferences of patients controlling resources for their larger lives Rationing is still strong medicine to swallow but then it becomes what patients as well as the doctor ordered Menzel develops this central idea and applies it to major issues of health policy and economics the notion of pricing life the long run cost of prevention measuring quality of life imperiled newborns adequate care for the poor containing costs by market competition malpractice suits procuring organs for transplant and dying expensively in old age He provides a hard hitting critical philosophical discussion of these issues in non technical language accessible to a wide range of readers interested in policy questions the book takes up The issues are fascinating the arguments are careful and the results often surprising

Updating Standard Cost Systems Carole B. Cheatham, Leo R. Cheatham, 1993-03-24 The new manufacturing environment requires new cost accounting systems as well as new technology While some authorities have advocated installing new and untried systems the authors of this book recommend updating the standard cost system which 85 percent of manufacturing firms have in place Updating the present system can achieve greater benefits in terms of providing information to managers for decision making It also allows the organization to avoid disruption to the corporate culture and the cost associated with a new system The authors show how standard cost systems can be redesigned to measure factors recognized to be important in today's manufacturing environment such as quality production levels and throughput They demonstrate how standard cost systems can foster continuous improvement through dynamic rather than static standards After examining characteristics of the new manufacturing environment and benefits of upgrading the cost system ways to update the traditional standard cost system are discussed Revisions include a unique input output method of variance analysis specific metrics related to manufacturing performance ways to identify cost drivers and use of dynamic standards The authors demonstrate how to redesign the information gathering and reporting system as new manufacturing procedures are put in place They discuss ways that marketing activities are affected and how to plan plant and equipment expenditures in an automated environment This book is directed primarily towards accountants and managers needing to improve informational content of accounting data for

decision making purposes It should also be beneficial to any person within the business firm who either supplies data of this type or uses it such as project analysts controllers managers and even management trainees Academicians teaching cost and managerial accounting as well as those teaching production management and financial decision making courses should find it beneficial as a text supplement or as a primary text in courses dealing with current problems in today s changing manufacturing environment

Pricing Life Peter A. Ubel,2000 A rational look at health care rationing from ethical economic psychological and clinical perspectives Although managed health care is a hot topic too few discussions focus on health care rationing who lives and who dies death versus dollars In this book physician and bioethicist Peter A Ubel argues that physicians health insurance companies managed care organizations and governments need to consider the cost effectiveness of many new health care technologies In particular they need to think about how best to ration health care Ubel believes that standard medical training should provide physicians with the expertise to decide when to withhold health care from patients He discusses the moral questions raised by this position and by health care rationing in general He incorporates ethical arguments about the appropriate role of cost effectiveness analysis in health care rationing empirical research about how the general public wants to ration care and clinical insights based on his practice of general internal medicine Straddling the fields of ethics economics research psychology and clinical medicine he moves the debate forward from whether to ration to how to ration The discussion is enlivened by actual case studies
