liver

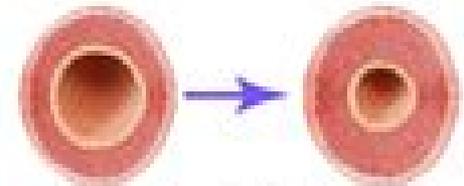

angiotensinogen

Renin release from kidney

Renin acts on angiotensinogen to form **angiotensin I**.

Angiotensin II also acts directly on blood vessels, stimulating vasoconstriction (narrowing).

ACE (angiotensin-converting enzyme) release from lungs

ACE acts on angiotensin I to form **angiotensin II**.

NaCl  
H<sub>2</sub>O

Angiotensin II acts on the adrenal gland to stimulate release of **aldosterone**.

Aldosterone acts on the kidneys to stimulate reabsorption of salt (NaCl) and water (H<sub>2</sub>O).

## **Renin Angiotensin System And The Heart:**

*Renin Angiotensin System and the Heart* Walmor C. De Mello, 2005-10-31 Recent studies have shown that the heart possesses an intrinsic renin angiotensin system that is controlled by tissue specific parameters that are activated by biomechanical stress This book reviews the latest information on the way in which both the plasma and cardiac renin angiotensin systems affect heart function It covers the cell and molecular biology of these systems with contributions on renin synthesis uptake and the intracellular signalling pathways Particular insight comes from transgenic mouse models in which either mouse or human genes for various components of the renin angiotensin system are expressed Other topics covered include wound healing as well as the trophic effects of aldosterone Contains the most recent findings on the renin angiotensin system and the heart Written by an international team of distinguished scientists Covers both the cellular and molecular basis of the renin angiotensin system and the clinical relevance of this research **Renin Angiotensin System and Cardiovascular Disease** Walmor C. DeMello, Edward D. Frohlich, 2009-09-01 This book offers the latest research into the role of the renin angiotensin system on cardiac and vascular functions and in cardiovascular diseases It covers vital aspects such as intracellular signaling and regulation of cell volume in the failing heart *Cellular and Molecular Biology of the Renin-Angiotensin System* Mohan K. Raizada, 2018-01-18 Cellular and Molecular Biology of the Renin Angiotensin System provides the first review and update of the state of the art cellular and molecular aspects of the renin angiotensin system The book presents detailed analyses from world experts on each component of this system including future directions Topics range from angiotensin II receptor subtypes to processing of renin to the use of transgenic animal models for studying the role of this system in hypertension Cellular and Molecular Biology of the Renin Angiotensin System is essential reading for physiologists of the renin angiotensin system endocrinologists cardiovascular specialists renal physiologists and neurobiologists [Renin Angiotensin System and the Heart](#) Walmor C. Dhalla, Sukhwinder K. Bhullar, Anureet K. Shah, 2023-01-01 This book on Renin Angiotensin System in Cardiovascular Disease includes 25 chapters which are organized in three sections namely i

modulatory aspects ii pathophysiological aspects and iii pharmacotherapeutic aspects It includes an updated as well as comprehensive knowledge about molecular and cellular aspects for the role of the renin angiotensin system RAS in the pathophysiology and therapy of cardiovascular diseases such as hypertension atherosclerosis ischemic heart disease and heart failure This book emphasizes the molecular and cellular mechanisms signaling transduction pathways involved in the development of different cardiovascular diseases due to the prolonged activation of RAS Furthermore biochemical mechanisms are outlined for the inhibition of this system by the blockade of angiotensin converting enzyme as well as angiotensin II type 1 receptors in patients suffering from cardiovascular abnormalities Since cardiovascular disease is the number one cause of death worldwide leading to approximately 17.9 million deaths each year there is a keen interest in understanding the pathogenesis and improving its therapy In this regard we can attest that this book provides ample information about essential components of RAS and their role in the development of cardiovascular disease From the selection of recognized global experts in their area of investigation this book can be seen to cover diverse cardiovascular aspects and molecular and cellular mechanisms of angiotensin II action for the development of different cardiovascular abnormalities It is our contention that this book will be most suitable for promoting knowledge in the field of RAS biology and will be of great interest to health professionals involved in both experimental and clinical cardiology as well as academic investigators and cardiovascular scientists graduate students and fellows worldwide

**Renin-Angiotensin Aldosterone System** Edward D. Frohlich, Richard N. Re, 2009-09-18 With great pleasure we present our Third International Workshop on The Local Cardiac Renin Angiotensin Aldosterone System RAAS held at the Ochsner Clinic Foundation in November 2008 When this meeting was first organized in 2002 we were pleased that all who were invited to participate in our first workshop attended our program and what is most satisfying all of these participants returned for the second and this the third workshop In addition we are delighted that a number of additional workers in this growing field of investigation joined us for this third program Over the years since our first workshop there is little doubt as to the existence of a local RAAS in the heart Indeed there is substantial evidence as to the existence of other local systems in brain vessels adrenal and as presented in the current workshop the kidneys What is even more stimulating intellectually through duplication of local RAAS systems a remarkable yin yang biological balance is provided by nature Thus in the current third workshop considerable evidence has accumulated over the years for complicated local systems that serve to provide exquisite and unique local control of local organ functions

#### *Tissue Renin-Angiotensin Systems* Amal K. Mukhopadhyay, Mohan K.

Raizada, 2013-11-22 Recent progress in recombinant DNA technology and the availability of a number of nonpeptide subtype specific receptor antagonists and of specific antibodies to components of prorenin renin angiotensin system PRAS have led to rapid advances in the understanding of the multifaceted role of angiotensin II classically known as a peptide hormone of cardiovascular homeostasis Accumulating evidence suggests responsible for the regulation gestures that in addition to its role in salt

and water metabolism PRAS may control other physiological functions including neurosecretion cellular proliferation hypertrophy and or differentiation angiogenesis and gonadal function At the same time it is becoming evident that the specialized functions of endocrine glands are not only regulated by trophic hormones but also by locally produced paracrine autocrine factors The concept is emerging that tissue PRAS is one such locally active regulatory system With more and more reproductive and endocrine organs being added to the list of tissues that contain a local tissue PRAS questions are being raised by the reproductive biologists and endocrinologists as to the role of such systems in the tissues of their interest On the other hand the cardiovascular and renovascular physiologists are wondering about the relevance of PRAS in various peripheral tissues compared to those of the classical cardiovascular organs It appeared therefore that the time was ripe for a meeting to consider a merger of interest in these two important but heretofore distinct areas of physiology
