**Reporting Climate Change in the Global North and South** Jahnnabi Das, 2019-08-29 This book reveals how journalists in the Global North and

Global South mediate climate change by examining journalism and reporting in Australia and Bangladesh This dual analysis presents a unique opportunity to examine the impacts of media and communication in two contrasting countries in terms of economy income and population size which both face serious climate change challenges In reporting on these challenges journalism as a political institutional and cultural practice has a significant role to play It is influential in building public knowledge and contributes to knowledge production and dialogue however the question of who gets to speak and who doesn't is a significant determinant of journalists capacity to establish authority and assign cultural meaning to realities By measuring the visibility from presences and absences the book explores the extent to which the influences are similar or different in the two countries contrasting how journalists communication power conditions public thought on climate change The investigation of climate communication across the North South divide is especially urgent given the global commitment to reduce greenhouse gas emissions and it is critical we gain a fuller understanding of the dynamics of climate communication in low emitting low income countries as much as in the high emitters high income countries This book contributes to this understanding and highlights the value of a dual analysis in being able to draw out parallels as well as divergences which will directly assist in developing cross national strategies to help address the mounting challenge of climate change This book will be of great interest to students and scholars of climate change and environmental journalism as well as media and communication studies more broadly

book focuses on one critical challenge climate change Climate change is predicted to lead to an increased intensity and frequency of natural disasters An increase in extreme weather events global temperatures and higher sea levels may lead to displacement and migration and will affect many dimensions of the economy and society Although scholars are examining the complexity and fragmentation of the climate change regime they have not examined how our existing international development migration and humanitarian organizations are dealing with climate change Focusing on three institutions the United Nations High Commissioner for Refugees the International Organization for Migration and the United Nations Development Programme the book asks how have these inter governmental organizations responded to climate change And are they moving beyond their original mandates given none were established with a mandate for climate change It traces their responses to climate change in their rhetoric policy structure operations and overall mandate change Hall argues that international bureaucrats can play an important role in mandate expansion often deciding whether and how to expand into a new issue area and then lobbying states to endorse this expansion They make changes in rhetoric policy structure and operations on the ground and therefore forge frame and internalize new issue linkages This book helps us to understand how institutions established in the 20th century are adapting to a 21st century world It will be of great interest to scholars and students of International Relations Development Studies Environmental Politics International Organizations and Global Governance as well as international officials

**Understanding Climate Change Feedbacks** Panel on Climate Change Feedbacks, Board on Atmospheric Sciences and Climate, 2003-12-16 During the past decade scientists have learned much about the complex natural processes that influence climate variability and change and our ability to model climate has increased significantly We also have begun to better identify those parts of the climate system that are particularly important and not well understood and that therefore limit our ability to project the future evolution of Earth's climate One of these critical areas is our understanding of the role of feedbacks in the climate system and their role in determining climate sensitivity Feedbacks are processes in the climate system that can either amplify or dampen the system's response to changed forcings This study looks at what is known and not known about climate change feedbacks and seeks to identify the feedback processes most in need of improved understanding It identifies key observations needed to monitor and understand climate feedbacks discusses ways to evaluate progress in understanding climate feedbacks recommends ways to improve
