**Reptilian Incubation** Denis Charles Deeming,2004-01-01 Reptiles have been a topic for scientific study for many decades and remain widely studied around the world In particular their reproductive patterns and strategies have been extensively studied proving useful in analysis of life history strategies A pivotal aspect of reptilian reproduction is incubation of eggs Oviparity is found in all turtles crocodylians and the tuatara and is prevalent in many lizards and snakes Many aspects of the eggs embryos and incubation conditions have been the subject of numerous scientific reports This volume is dedicated to systematic analysis of reptilian incubation The concept for the book is to look at reptilian eggs development and incubation conditions in a functional way with particular emphasis on the natural incubation environment and rather than concentrating on Family accounts e g incubation in crocodylians the chapters review the topics in all reptile types allowing for the first time a systematic comparison of incubation between crocodylians turtles and squamates In addition to reviewing current

information the authors briefly look towards the future and outline areas where further research is needed **Nests, Eggs, and Incubation** D. Charles Deeming,S. James Reynolds,2015-08-13 Nests Eggs and Incubation brings together a global team of leading authorities to provide a comprehensive overview of the fascinating and diverse field of avian reproduction Starting with a new assessment of the evolution of avian reproductive biology in light of recent research the book goes on to cover four broad areas the nest the egg incubation and the study of avian reproduction New research on nest structures egg traits and life history is incorporated whilst contemporary methodologies such as self contained temperature probes and citizen science are also discussed Applied chapters describe how biological knowledge can be applied to challenges such as urbanisation and climate change The book concludes by suggesting priorities for future research This book builds upon the foundations laid down by Charles Deeming s 2002 work Avian Incubation available for readers of this book to access online for free much of which remains relevant today Read in conjunction with this previous volume it provides an up to date and thorough review of egg biology nest function and incubation behaviour which will be an essential resource for students of avian biology as well as both professional and amateur ornithologists working in the field of avian reproduction *Nesting in reptiles: natural and anthropogenic threats and evolutionary responses* J. Sean Doody,Jeanine M. Refsnider,2023-01-06

**Incubation of Reptile Eggs** Gunther Köhler,2005 Over eighty percent of living reptiles reproduce by laying eggs Many reptile species are threatened by extinction and captive breeding programs are one way to prevent their complete disappearance Correct incubation of the eggs is a critical step in the captive breeding process This book brings together the available information and experiences on reptile egg incubation from numerous experts and provides a comprehensive description of reptile egg morphology reptile embryo physiology and development incubation techniques solutions for problems with incubation and details to assure the successful incubation of the eggs of most reptile species **Diseases and Pathology of Reptiles** Elliott Jacobson,Michael Garner,2021-08-29 This two volume set represents a second edition of

the original Infectious Diseases and Pathology of Reptiles alongside a new book that covers noninfectious diseases of reptiles Together these meet the need for an entirely comprehensive authoritative single source reference The volumes feature color photos of normal anatomy and histology as well as gross light and electron microscopic images of infectious and noninfectious diseases of reptiles The most detailed and highly illustrated reference on the market this two volume set includes definitive information on every aspect of the anatomy pathophysiology and differential diagnosis of infectious and noninfectious diseases affecting reptiles

**Ecophysiological Analysis of Vulnerability to Climate Warming in Ectotherms** Lin Zhang,Buddhi Dayananda,Bao-jun Sun,Jigang Xia,2023-07-25 Temperature plays a critical role in animal survival and climate warming is one of the greatest threats to global biodiversity in the future It is already affecting species and communities with severe impacts and it is predicted that climate warming will cause species extinctions and distributional shifts in the coming decades The impact of climate warming is expected to be particularly severe on ectothermic animals including fishes amphibians and reptiles Thus assessing species responses to ongoing climate warming and determining what conservation actions should be taken are among the most significant and controversial challenges for ecologists Identifying the most vulnerable species to extinction as a result of climate warming is an appropriate first step in mitigating the impacts of a changing world An organism s vulnerability to climate warming depends on its sensitivity to environmental changes its exposure to the change and its ability to recover from and potential to adapt to change The interaction of these factors makes predicting the effects of climate warming on species a complex and major challenge for ecologists Developing a deeper knowledge of ectotherms vulnerability to climate warming is crucial to enhance our understanding of extinction processes and significantly contribute to conservation efforts by guiding the implementation of better policies and management strategies to prevent the extinction of remaining populations Investigations of climate warming vulnerability are likely to benefit from measurements of environmental conditions taken at the scale at which organisms experience them Therefore the main objective of this interdisciplinary Research Topic is to bring together research on how ectotherms respond to climate warming at various levels We will particularly focus on the life history energy strategy physiological response etc We encourage inter and multidisciplinary research approaches linking molecular biology thermal physiology and ecology behavioral ecology functional ecology evolutionary genetics and bioenergetics
